Good life Pest Control and cleaning services is a recognized industry leader in providing high quality and reliable pest control service solutions to all types of businesses and home owners across the UAE. Whether your pest problems are rats, mice, cockroaches, flies, fleas, ants or any other occasional invaders, Good life pest control Services is able to design a Tailor-made Solution to defend your property against disease carrying, damaging pests.

Good life Pest Control services' in depth experience, technical and resource capability allows us to provide our clients with best in the class service solutions no matter what the pest issues being faced or client requirements are, big or small!

Good life pest control provides Integrated Pest Management (IPM) for all our clients and their properties. This is partly achieved through our initial consultation with the customer and a survey of the property, followed by a service solution plan that has taken into consideration clients specific needs and concerns, authority requirements, past and existing pest issues, causing factors, as well as potential threats.

Our approach that one size does not fit all means that our customers get the service they need in the most practical and economical way possible which is maintained by the combination of modern, safe and effective control techniques in depth knowledge & experience with an ongoing, open working relationship from our dedicated team.

Good life pest control has been committed to provide **World Class Pest Management Services** for Residential and Commercial Customers. We understand that pests in your home are not simply an inconvenience; they pose a serious threat to you, your family and your property. We have years of experience in the local residential market, and is committed to resolving your pest problems as quickly, safely and economically as possible. Our Technicians are fully licensed and certified by the Dubai Municipality Pest Control Section.

Good Life Cleaning Services is providing all type of cleaning with the passion of serving Dubai and other areas of UAE. With the most valued clients, Good Life Cleaning is one of the guaranteed most competitive cleaning services providers in Dubai.

In every aspect of our business, we strive to earn and keep the trust of our clients give us when they choose Good Life Cleaning Services as their cleaning provider as we use the labor of trained cleaning crews to serve clients

OUR VISION: Our vision is maintaining pest free environment without hazarding public health and environment

OUR MISSION: Our mission is to provide our clients with the highest level of pest control and cleaning service in a cost effective manner

OUR VALUES: We are committed to excellence through the systematic and disciplined management of our operations

EXECUTIVE SUMMARY:

Good Life is pleased to submit its proposal for a scope of work concerning the following pests.

- 🏠 **Cockroaches**
- 🏠 **Ants**
- 🏠 **Flies**
- 🏠 **Flies Breeding Sites**
- 🏠 **Mosquitoes**
- 🏠 **Mosquitoes Breeding Sites**
- 🏠 **Rats and Mice**
- 🏠 **Bedbugs**
- 🏠 **Red Back Spiders & Close Relatives**
- 🏠 **Scorpions**
- 🏠 **Wasps / Bees nests**
- 🏠 **Weed**
- 🏠 **Bird Control**

We believe that modern pest control should be based on the foundation of scientific principles, technology, good judgment and sound decision. We recommend an Integrated Pest Management Program (IPM) that will not only address your present but future pest problems as well.

Pest control companies are not necessarily experts in exterminating pests in your home and business. However experience and training can make a big difference when choosing which pest control company to call. GOOD LIFE has been taking care of pest problems. Our technicians undergo rigorous training on pest biology and management to ensure that we only provide you with responsible treatments.

At Good Life, we offer the following services:

Crawling Insects' Control

For the infestation of cockroaches, bed bugs, and other crawling insects comprehensive spraying will be carried out in the premises using Approved chemicals by Ministry of Environment and Water of Dubai and Sharjah Municipality. As for hard to reach and critical areas gel baiting shall be done.

Flying Insects' Control

Flying insects can be controlled in numerous ways like misting, fogging and larviciding, however the ultimate solution for pest infestation would be eliminating the root cause of the infestation through sanitation and exclusion methods.

Rodent Control

We do Internal and External rat bait system using approved rodenticides. They will be placed only on selected areas particularly on possible runways and breeding site of rat and mice. We also offer pest control for other pest, like snakes, birds, and cats' control. We offer alternative exclusion methods like trapping and exclusion methods like nets, as we from Good Life

Control for Flying Insect Pests (Flies, mosquitoes, Wasps, Bees)

- **Sticky Traps:** effective in monitoring the level of pest infestation in an area. If the pest infestation is low, the sticky traps will also be effective in eliminating the pest population in a confined area.
- **Electric Fly Traps:** Fly traps using ultraviolet light are also effective in controlling pest population when used indoors. If used outdoors, the fly traps will only complete with daytime sunlight, thus becomes ineffective.
- **Drain Treatment:** for elimination of fly harbourages, especially drain flies. The product will be used with a foaming agent to treat drainage systems. This treatment will normally be conducted at the end of the day for overnight action on fly habitats and breeding sites.
- **Cracks and Crevice Treatment:** the product will be sprayed on wall void and floor cracks only to minimize chemical exposure to humans and non-target insects.
- **Spot Treatments:** spraying to be conducted and limited only to areas where there is positive pest activity. Spot treatments will not be conducted near food preparation areas unless permitted by the pesticide product label.
- **Fogging Treatment (Outdoors):** same with misting treatment but instead of mist, the liquid chemicals are converted into fog. The fog will quickly kill flying insects and crawling insects as well. Due to high probability of chemical exposure, this treatment is used only during heavy pest infestation when normal pest control treatments are deemed ineffective.
- **Misting Treatment (Indoors):** a pest control treatment designed to spray pesticides in a fine mist in a confined area to kill heavy infestation of flies and mosquitoes.

Control for Crawling Insect Pests (Ants, Cockroach, Bed Bugs)

- **Ant Stations** – liquid borate bait that attracts and kills ants and their colonies. It is packed in convenient bait stations which can be placed near wall/floor cracks and holes and ant pathways.
- **Granular Baits** – product formulated as a ready-to-use fine granular form, ideal for indoor and outdoor use. Baits are perfect for perimeter and crawl space treatments as well as difficult to reach areas like cracks and crevices, under cabinets and appliances, in and around waste containers and into openings around drains, water pipes and electrical conduits
- **Gel Bait Treatment** – Gel baits to be applied in small amounts. This type of treatment is especially recommended in food preparation areas where there's usually a heavy infestation of cockroach and ants and chemical spraying is very limited.
- **Spot Treatments** – spraying to be conducted and limited only to areas where there is positive pest activity. Spot treatments will not be conducted near food preparation areas unless permitted by the pesticide product label
- **Cracks and Crevice Treatment** – the product will be sprayed on wall void and floor cracks only to minimize chemical exposure to humans and non-target insects.

CONTROL FOR RODENT PESTS

- **Sticky Traps:** effective in monitoring the level of rat infestation in an area. If the rat infestation is low, the sticky traps will also be effective in eliminating the pest population in a confined area.
- **External Rat Baiting System:** to be installed around the perimeter of home or building. Anti-coagulant rodenticide baits will be placed inside the bait stations. The bait stations are locked to protect humans and other non-target animals from getting into the baits.
- **Rodent gel:** gel bait that can be applied along wall and floor cracks, holes, and voids. It can also be placed around pipe entry points where rats are most likely to enter from the outside. The rat gel will stick to the rat bodies and when they "clean" themselves, the rats will eat the gel and the active ingredient will act on their bodies.

TERMITE CONTROL SERVICES

Termites or white ants are not "Ants" at all. They more resemble cockroaches and develop from hundred to two hundred million years evolutionary history. Termites are small, white tan or black coloured insect belong order Isoptera. The Latin word Isoptera means equal wings and refers that front set of wings of reproductive termites is similar in size and shape to hind set.

Pre-construction anti-Termite Treatment

Termite Control is the first step to take if you are planning to build a house or commercial building. We use highly advanced techniques for treating the termite infestation. Creating a treated zone before the construction even begins, safeguards the building from future termite infestations. A direct injection of liquid pesticide is applied to eradicate termites completely from your premises. The different stages of our treatment include: The sides and bottom surface of the foundation trenches and pits are treated with chemicals to an appropriate height. Sides of all built-up walls that are in direct contact with the foundation, are also treated with chemicals. The chemicals are directed towards the masonry surfaces so

that earth in contact with these surfaces is well treated with the chemical. Before laying the floor, the top surface is also treated with chemicals. We also advise builders to take appropriate care during construction to avoid creating untreated gaps later.

Post Construction anti-Termite Treatment

STAGE 1: Treatment to wall and floor junction : Holes of 12mm diameter 12-20 inches apart will be drilled along the inner junction of wall and floor at a depth of 6" on the entire ground and 4" on the first floor premises. Termiticide solution will be injected under pressure into these holes to create barrier against termites. If heavy infestation is noticed on 2nd and above floors the same treatment will be carried out on that particular floor.

STAGE 2: Treatment to termite tubes : Visible shelter mud tubes are first pruned, to control the existing movement of termites. The mud tube will be then removed and treatment will be given to the infested area.

STAGE 3: Treatment along the external perimeter of the building: Trenching or drilling holes of 12mm diameter 12 inches apart along the external walls of the building at depth of 1ft. will be carried out to create a chemical barrier/killing field around the building. All the drilled holes will be sealed. If the building is on stilt,

holes will be drilled only along the column side at ground level. If there is loose earth around the walls of the building, rodding will be done on every ft. adjacent to the external surfaces of the foundation wall upto a depth of 500 mm from the ground level. If building is surrounded by garden, the treatment shall be carried out to soil, which is in immediate contact with the building.

OUR CLEANING SERVICES

- **Building Cleaning**
- **Office Cleaning**
- **Villa Cleaning**
- **Kitchen Cleaning**
- **Carpet Shampooing**
- **Sofa Shampooing**
