

COMPANY PROFILE

Introduction

WELCOME TO AMC PROTECTION

Established in 1996, AMC Protection has protected its Client's investment across the complete spectrum of the Construction industry in the GULF.

AMC has been the trusted Thermal & Moisture Protection expert in a vast range of projects; from airports to architectural masterpieces, skyscrapers to shopping malls & luxury hotels. AMC has provided a full variety of innovative, sustainable waterproofing & EIFS solution to its range of Clients in the Gulf for mega & multi-billion projects. We pride ourselves on providing peace of mind and stability in this ever evolving and challenging world of construction in a desert environment.

AMC PROTECTION LLC

I established AMC Protection in 1996. We cater to the ever-increasing demand for highly advanced solutions in Thermal & Moisture Protection for the construction industry in Arabian Gulf. With offices in Abu Dhabi, Dubai & Doha, AMC continues to be a recognised leader in its field, providing our Clients with leading edge technology. We carefully source our specialized products from a broad range of international and regional manufacturers, sourcing solutions for the increasingly technical challenges of the continuously evolving construction industry.

Monzer Akbik | Founder and CEO

Quality Guarantee

The successful delivery of hundreds of projects testament to AMC's commitment to quality assurance and exemplary customer service-founding principles since the company's inception.

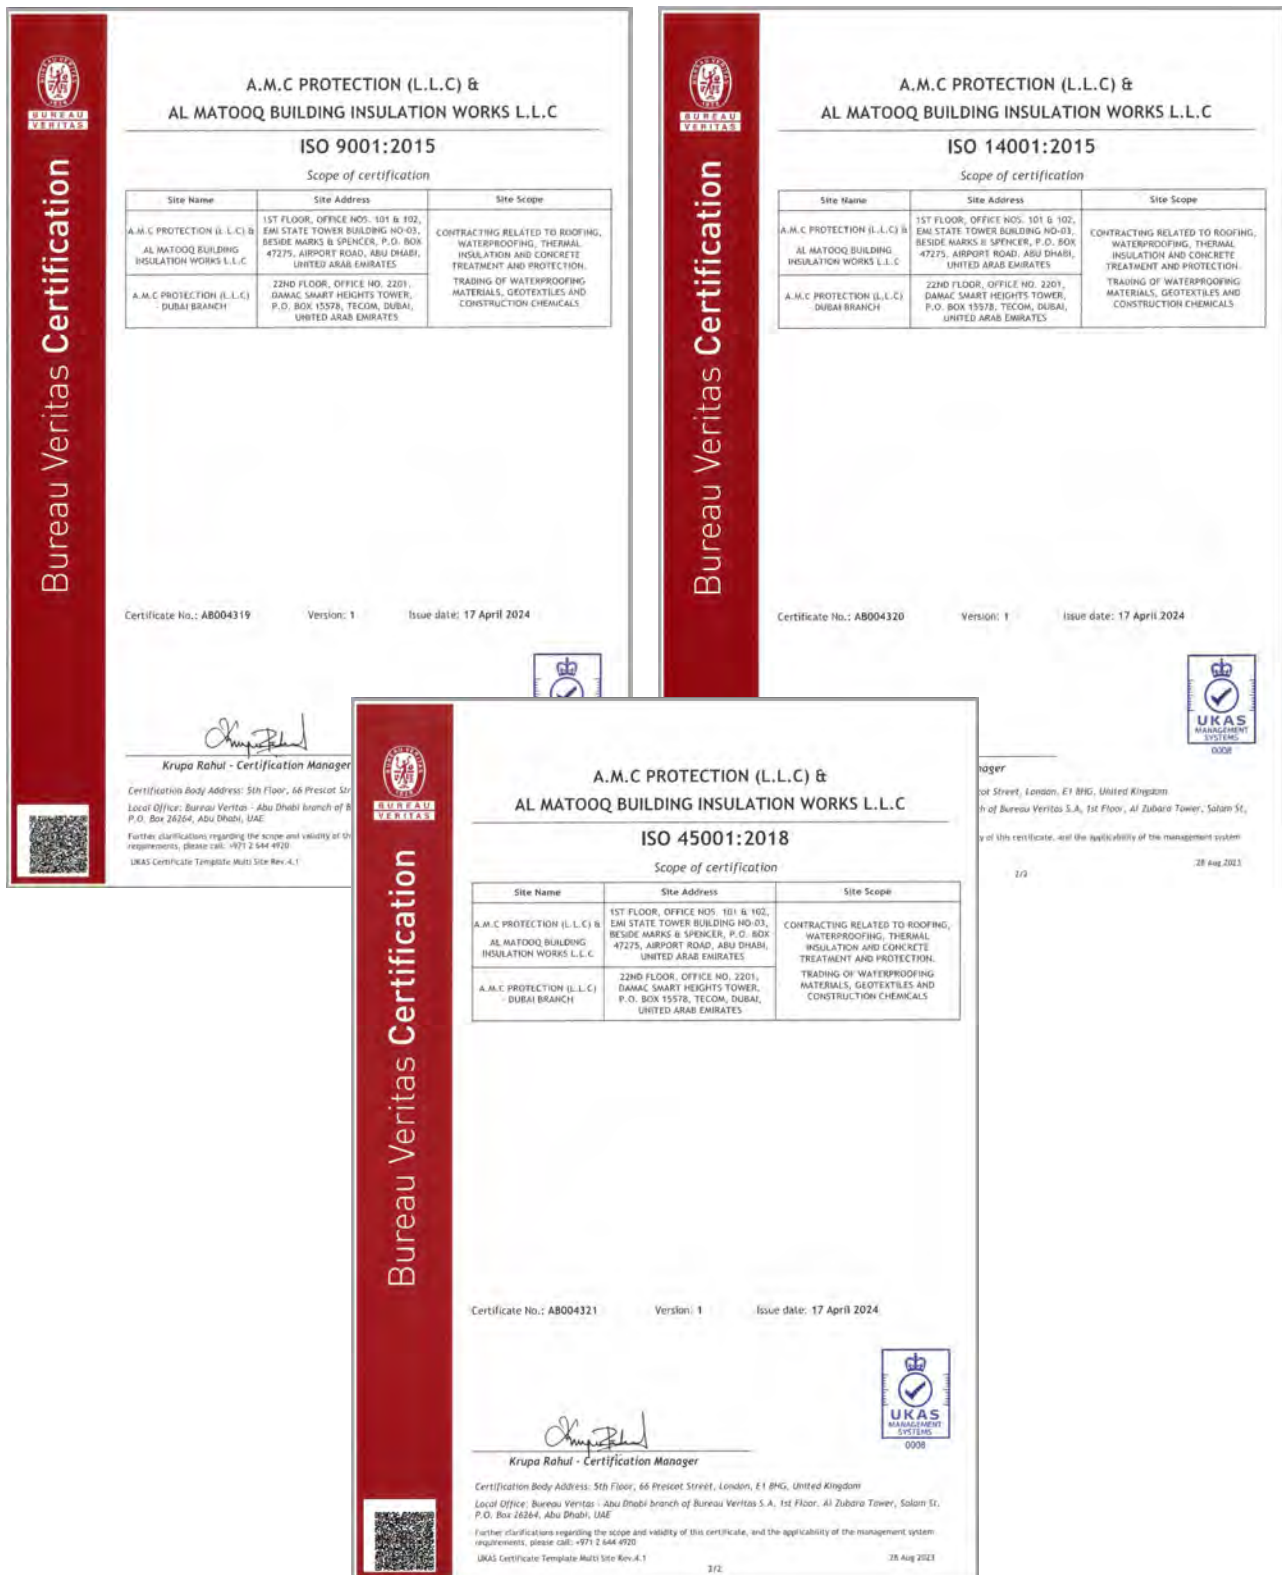

Mission

To maximise the return on investment for all our Clients, we pledge to provide the highest degree of technically advanced, innovative and environmentally friendly solutions in Thermal & Moisture Protection.

Vision

Our vision is to continue being the regional technological leader within the ever-evolving Thermal & Moisture Protection market. We will keep pushing the boundaries of innovation, quality, execution, and customer service, while efficiently delivering solution-focused packages for our Clients.

Crowned with the Internationally recognised ISO 9001:2015, ISO 14001:2015 & ISO 45001:2018 Certificates. AMC is one of the most sought after companies in the specialist field of concrete treatment and protection.

SERVICES & EXPERTISE

AMC Protection takes pride in employing only the most highly skilled and disciplined professionals across all layers of our organisation. This allows us to execute and deliver projects to the highest standards, at the most competitive cost: On time, every time.

BASEMENT TANKING SYSTEMS

These systems are by far the most sensitive waterproofing application in the Gulf, due to the high underground water-table level. AMC offer a turn-key solution for all types of Basement Tanking Systems starting from the design process through to final execution. We utilise the best certified systems from globally renowned manufacturers, whether the application is raft or deep foundation, provided with an extended guarantee.

EIFS SYSTEM

Exterior Insulation & Finishing System (EIFS) is an energy-efficient thermal envelope applied to the exterior surface of the building, finished with a durable, decorative & protective coating system. AMC Protection has executed EIFS Systems since 2013 with many Client projects delivered in the region.

ROOFING & WATERPROOFING SYSTEMS

Whether your construction is a concrete, steel or wooden structure. Roofing Systems is an essential element. AMC has a vast experience in 'green roof' design and execution. We provide complete solutions – conventional, inverted and hybrid – thanks to the vast variety of Roofing Systems available in AMC range. This suite of solutions has distinguished us from other contractors who generally offer limited variety.

PROTECTIVE COATING & INDUSTRIAL FLOORING

Due to the increasing demand of multi-storey car parking structures, data centres, warehouses and factories in the Gulf, there was a sharp rise in demand for Industrial & Traffic Coating Systems in recent years. AMC Protection's team of specialists in Protective Coating & Industrial Flooring provides all types of flooring solutions for our Client's needs.

BRIDGE DECK COATING

Bridge decks are exposed to high mechanical stresses during lifespan and in such important structures, there are various factors that cause significant damage to the concrete substrates, leading to corrosion of reinforcement, thus making waterproofing and protection of decks and construction joints vital during construction.

DESIGN & ENGINEERING

AMC Protection follows an important principle, that no successful and quality engineering work is possible without a complete design package that covers all angles and details. Designs including detailed CAD Drawings, Building Information Modeling (BIM), Method Statements, Quality Control and Safety plans, are adopted for each project. These include full coordination and cooperation with the related manufacturers requirements and recommendations, as well as other trades in the project.
