

ال هــل لـلــــجـارة ذ.م.م ALAMAL TR L.L.C

With over two decades of experience and an in-depth knowledge of Warehousing System.

At Al Amal Trading L.L.C, we provide high quality, low cost storage solutions. We have pallet racking and shelving available to suit all of your requirements. All products can be custom fitted to suit your warehouse needs. We can design the layout of your warehouse to ensure you get the best storage capacity for the area you have to work with.

About Us

We are the leading suppliers of storage solutions in UAE. We have the customers all over UAE, Middle East and African countries. We offer our clients with a wide variety of display and storage racks and shelves for commercial as well as industrial purposes.

Our full range of products such as Light Duty Racking Systems, Medium Duty Racking Systems, Heavy Duty Racking Systems, Steel Platform, Cantilever Racking System, Sotted Angle Shelving System, Drive in rack System, Bolt Free Shelvings, File Racks, long span Shelving, Mezzanine Floor, Selective Pallet Racking, Gondola Shelving and Office Systems cater to all market segments, such as industrial, warehouse, office, retail, hypermarket and residential use.

Heavy Duty Racking System

Heavy duty racking is used for high loads and bulk storage and is adjustable racking system and can be decked with steel shelves or plywood or can be used open for pallet loads. In this shelving system, using heavy duty beams and frames and steel support bars are fixing each level which helps to increase loading capacity. This shelving system is accessible with an ample collection of heights, depths and lengths. This shelving system offers an easy to assemble shelving system at very competitive prices and choice of high quality commercial plywood or steel decking panels. Heavy duty shelving system is the easy storage solution for stores, workshops, warehouses which provides one of the most adaptable and levelheaded.

Rack Supported Platform System

Shelving supported mezzanines is the creative way to create an extra work area level using standard

boltless shelving components. Additional materials will be needed for the decking, stairs, and fall protection. Conveyor & Storage Solutions has experience in designing, engineering, installing, and permitting industrial shelving supported mezzanine to increase unused cubic of warehouses and area maximizes storage your capacity.

Bolt free Shelving System

Bolt free metal shelving is an excellent way to ensure that your storage units are easy to assemble, sturdy and structurally sound, without the hassles of using nuts and bolts. The advanced compression clip system of Metalware Interlok Boltless Shelving is integral to its design. The compression clips that are inserted into t-post slots of the no bolt shelving unit create a load bearing surface which support each shelf corner. With this innovative design, these boltless steel shelving units have the strength of traditional shelving units while being easier to install and move.

> Bolt free Shelving is extremely durable, which makes it the economic choice for all types of storage. It is strong enough to handle a variety of weight loads, and versatile enough to be used in a number of different settings, be it a retail environment, showroom, warehouse or industrial setting.

Features

- * Strong enough to support multi-level pick towers
- * Easy and quick installation
 - * Ability to add extra shelves to increase storage room
 - * Ability to add reinforcement bars to increase load capacity

Slotted-angle Shelving System

Our Shelving Solutions covers all your Store, Warehouse and Office shelving needs, designed to fit your requirements and maximize storage space.

Features

- * A simple and economic system for a huge range of applications.
 - * Adaptable to all storage needs.
 - * Easy to Assemble.
 - * Excellent versatility.

Longspan/Medium Duty Shelving System

Long span racking offers you virtually unlimited opportunities to expand your storage capacity, giving you higher density storage and greater flexibility whether you are storing boxes, cartons, tubes or wires. In chinese market, long span racking is also widely used by customers.

This product is versatile, given its adaptability to any type of unit load; selective, as it allows immediate access to all unit loads and/or references stored; and dynamic, since it is easily assembled and/or disassembled, and components are also easily replaced and/or added.

Mobile Shelving System

00 00 00 00 00 00 00

At Al Amal Trading L.L.C, have the perfect combination of flexibility, convenience, capacity, and safety and durability that far surpass rivaling standard, static, stationary shelving; so whatever you are looking to put on your shelves, and however you want to arrange it, we've got you covered. Our high-density movable shelving systems enable you to recover 50% of your floor space or double your storage capacityic needs.

Drive-In Racking System

Drive-In racking is used where high-density storage is required. It is frequently used in facilities with a low number of product lines. Pallets are stored in a block system with a reduced number of aisles. Fork-lifts drive into the racking between uprights to load or retrieve pallets. Drive in pallet rack systems can be designed to store anywhere from 2 to 10 pallets deep per pallet position. If you are curious about how a Drive In Rack system can help maximize your warehouse or distribution center space, contact one of our Minnesota based pallet rack design specialists.

Cantilever Racking System

Cantilever Rack system is designed to manage loads of varying length and proportion. Product can be completely accessible from the front without any of the horizontal restrictions of traditional pallet rack. The entire length of the cantilever rack may be used for storage. For added flexibility, loads of differing lengths may be stored on the same cantilever rack and even at the same level.

> All cantilever can be used as single-sided or double-sided designs and the rows of uprights can be any length required. The cantilever arms can be modified flexibly for stored goods with different heights and loading requirements. Subsequent adjustments and adaptations can be made without tools.
