FREELINE
MAINTENANCE & CLEANING SERVICES LLC

At freeline cleaning and plumbing services –we are one of the leading approved cleaning company by dubai municipality. We pride ourselves in the ability to guarantee the types of high quality customer services that our clients have come to expect and deserve. We choose tremendous staff and offer extensive training to our teams. We also have inspections and follow-ups on all of our services. At free line we welcome any feedback from our clients to enable us to consistently improve our methods.

Kitchen Exhaust Duct Cleaning & Maintenance Services

- Removal of roof/wall mounted fans from ductwork to degrease the base, shroud and blades.
- Inspecting exhaust fans for loose or worn out fan belts.
- Cleaning and degreasing all hood filters, hood parts and accessories and replacing if necessary.
- Cleaning all accessible parts of ductwork from exhaust fans to each individual hood.
- Applying food-safe polish to stainless steel ductwork.
- Thoroughly cleaning all affected areas (remove plastic, mop, remove any debris, etc.).
- Providing a complete, detailed written report of all work performed, and deficiencies in the exhaust system, and recommendations for addressing any problems.

Grease trap Installation & Cleaning services

- An unmaintained grease trap does not stop any grease waste from entering the sanitary sewer or septic system. Grease blockages can ruin a restaurant in minutes from back-ups.
- To prevent sanitary and combined sewer system blockages, obstructions and overflows due to the contribution and accumulation of fats, oils and grease from food service establishment.
- Grease traps must be cleaned every 4-6 weeks.
- Reliable, efficient, hygienic and cost effective maintenance, maintain proper transport manifests.
- and follow all municipality regulations.
- Attractive and competitive terms.

Grease trap service visits upon scheduled annual contract.

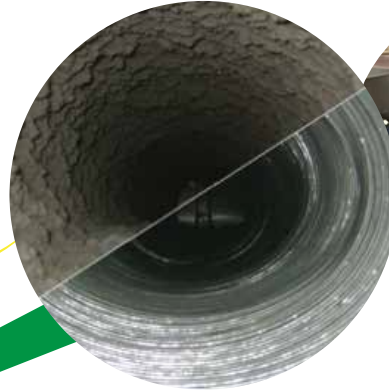

Water Tank Cleaning Services

- Free line cleaning services L.L.C offering a fully oriented service packages for water tank cleaning and maintenance services. Our clean and efficient methods make a valuable tool for achieving perfect water quality. With our versatile equipment, we can deal with any water tanks regardless of their type and general condition.
- Free line cleaning services L.L.C are fully licensed and municipality approved company based in dubai. We are offering you a reliable service through a team of professionals. Particular care devoted professionalism, and competitive prices are the staples of our business which allows us to cater to specifically to your requirements.
- Free line offer a hygienic and mechanized cleaning solution for water tanks that involve a six stage cleaning process using high pressure washer and antibacterial agents that are safe effective eco-friendly.

AC Duct Cleaning Services

- Inspection – a robotic inspection system is deployed to visually inspect the air duct before and after the cleaning. Clean the vent and grill covers to ensure that there is no residual dirt and dust.
- Mechanical Cleaning – this method is employed to remove particulates, debris and surface contaminants in the duct.
- Anti-Microbial Treatment – the entire duct is treated with the best non-leaching anti-microbial product for complete disinfection and sanitization.
- Clean the condensate pan to remove any dirt and grime.
- Clean the air ducts and replace the air filters to ensure a free flow of quality air.
- Clean the cooling and heating coils.
- Clean the blower assemblies thoroughly.
- Take care of the interior of the air handler cabinet.

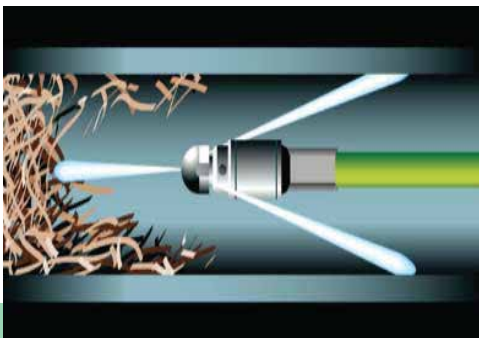

Septic/Sewage Tank cleaning and water removal

- Extended Life of the Septic Tank:
Septic tanks work to remove the solid waste from water disposed down the drains of a house, like the toilet or sinks, while the liquid waste goes through further treatment or is distributed into the soil absorption area.
- These traps are constructed outside the building to carry waste water discharge from washbasin, sinks, bathroom etc.
- And are connected to the nearest building drain/sewer so that foul gases from sewer do not come to the house.
- A sewage spill or septic tank overflow in your home can be extremely upsetting and costly, not to mention a potential health hazard.

High-Pressure Drain Line Jetting

- The water jet is used for industrial cleaning purposes. It uses a jet of water operating at a very high pressure.
- Cuts without heat and gives accurate cutting unlike other cutting methods.
- High pressure water jetting, being precise, minimizes waste material.
- Reduced blockage and clogs.
- Fixing slow drains.
- Reduce Odors.
- A clean and pleasant home environment.
- Safe and Clean Outdoors areas.
