MEDIGATE MEDICAL EQUIPMENT TRADING is the one of the best leading & fast growing companies for suppliers of all kinds of Medical Equipments, Disposable, Surgical, Dental and Laboratory, Paper products, cosmetics items, beauty products,. It was established in 2014 with a Strong vision to deliver quality and professional products in the health care industry. We import and export all types of Medical Equipments and all types of healthcare consumables.

- ◆ We support our costumers to the maximum and are committed to deliver the most advanced healthcare products
- ◆ We are a group of professionals who are committed to give quality service
- ◆ We always provide the industry a commitment that we work together for betterment of healthcare industry

TABLE OF CONTENTS

01 ICU EQUIPMENT

| | |
|---|----|
| ◆ Anesthesia Mechine | 02 |
| ◆ Ventilator | 03 |
| ◆ Versatile Ventilator | 03 |
| ◆ Portable Ventilator | 03 |
| ◆ Patient Monitor | 04 |
| ◆ Fetal Monitor | 04 |
| ◆ Fetal Doppler | 04 |
| ◆ Oxygen Concentrator | 05 |
| ◆ Suction Mechine | 05 |
| ◆ Electricalsurgical Unit | 06 |
| ◆ Infusion Pump | 06 |
| ◆ Syringe Pump | 06 |
| ◆ Portable Automated External Defibrillator | 07 |
| ◆ External Defibrillator | 07 |
| ◆ Examination Light | 08 |
| ◆ Surgical Light | 08 |
| ◆ LED Headlight | 08 |
| ◆ Operating Table | 09 |

02 MEDICAL IMAGING

| | |
|-----------------------------------|----|
| ◆ Mobile X-ray System | 10 |
| ◆ X ray Radiography System | 10 |
| ◆ C-arm Radiography System | 10 |
| ◆ Memmography System | 11 |
| ◆ X-ray Film Processor | 11 |
| ◆ Portable Ultrasound Scanner | 12 |
| ◆ Digital Ultrasound Scanner | 12 |
| ◆ Other Medical Imaging Equipment | 13 |

03 LABORATORY EQUIPMENT

| | |
|------------------------------|----|
| ◆ Hemotology Analyzer | 14 |
| ◆ Chemistry Analyzer | 14 |
| ◆ Blood Coagulation Analyzer | 14 |
| ◆ Microplate Reader | 14 |
| ◆ Urin Analyzer | 15 |
| ◆ ESR Analyzer | 15 |
| ◆ Other Laboratory Equipment | 15 |

04 NEONATOLOGY

| | |
|----------------------------|----|
| ◆ Infant Incubator | 16 |
| ◆ Infant Phototherapy Unit | 16 |
| ◆ Other Neonatal Equipment | 17 |

05 DENTAL

| | |
|---------------------------------|----|
| ◆ Dental Chair | 18 |
| ◆ Dental X-ray System | 18 |
| ◆ Panoramic Dental X-ray System | 19 |
| ◆ Other Dental Equipment | 20 |

06 MEDICAL OPTOELECTRONICS

| | |
|---------------------------------|----|
| ◆ Endoscope Video System | 21 |
| ◆ Operating Microscope | 21 |
| ◆ Colposcope | 21 |
| ◆ Operating Table | 22 |
| ◆ Other Medical Optoelectronics | 22 |

07 ECG & EEG

| | |
|-----------------------------|----|
| EMG | 23 |
| Wireless Stress ECG Systems | 23 |

08 STERILIZER

| | |
|--|----|
| ◆ Table Steam Sterilizer | 24 |
| ◆ Timed Tabletop Electric Boiling Sterilizer | 24 |
| ◆ Vertical Pressure Steam Sterilizer | 24 |
| ◆ Hot Air Oven | 24 |
| ◆ Horizontal Cylindrical Pressure Steam Sterilizer | 24 |

09 FURNITURE & LOGISTICS

| | |
|--------------------------|---------|
| ◆ FurnituAre & Logistics | 25 - 26 |
|--------------------------|---------|

10 PHYSIOTHERAPY

| | |
|-----------------|----|
| ◆ Physiotherapy | 27 |
|-----------------|----|

11 CONSUMENTS & INSTRUMENTS

| | |
|---------------------------|----|
| ◆ Consumets & Instruments | 28 |
|---------------------------|----|

Anesthesia Machine

The Anesthesia machine contains mechanical respiratory support (ventilator) and O2 support as well as being a means for administering anesthetic gases which may be used for sedation as well as total anesthesia. An anesthesia cart holds extra IV push meds for anesthesia, sedation and reversal, extra equipment that the person giving anesthesia/sedation might need, and the hardware for respiratory support and resuscitation

Advanced Model

Standard Model

Ventilator

A **ventilator** is a type of equipment that is used in the **ICU** to assist people in breathing when they are unable to do so themselves. The **ventilator** is attached to a tube placed in the patient's airway so it can deliver breathes into the lungs of the patient

Ventilator with Compressor

Standard Model

Versatile Ventilator (for Adults, Children & Infants)

A ventilator (or simply ventilator in context) is a mechanical ventilator, a machine designed to move breath ble air into and out of the lungs, to provide breathing for a patient who is physically unable to breathe, or breathing insufficiently.

Portable Ventilator

Transport ventilators — These ventilators are small and more rugged ,typically require power by a battery or a wall outlet (DC or AC) though some ventilators work on a pneumatic system not requiring power.

Patient Monitor

Multimodal monitors that simultaneously measure and display the relevant vital parameters like Such as least blood pressure and heart rate, and preferably also pulse oximetry commonly integrated into the bedside monitors in critical care units, and the anesthetic machines in operating rooms.

Fetal Monitor

Electronic fetal heart monitoring is done during pregnancy, labor, and delivery. It keeps track of the heart rate of fetus. It also checks the duration of the contractions of the uterus

Fetal Doppler

Fetal Doppler Monitors is a hand-held ultrasound transducer used to detect the fetal heartbeat for prenatal care. It uses the Doppler effect to provide an audible simulation of the heart beat.

Oxygen Concentrator

Oxygen concentrator is a medical device used to deliver oxygen to those who require it. ... Whereas a tank has a set amount of oxygen that it dispenses, a concentrator filters in air, compresses it, and delivers air continuously. The air supply will never run out.

Suction Machine

A Suction Machine is a device for removing liquids or gases by suction, especially an instrument that uses suction to remove substances, such as mucus or serum, from a body cavity. A suction machine is used to create a partial vacuum

Electrosurgery Unit

Electrosurgery is the application of a high-frequency (radio frequency) alternating polarity, electrical current to biological tissue as a means to cut, coagulate, desiccate, or fulgurate tissue.

Infusion Pump

Infusion pumps can administer fluids in ways that would be impractically expensive or unreliable if performed manually by nursing staff. For example, they can administer as little as 0.1 mL per hour injections (too small for a drip), injections every minute, injections with repeated boluses requested by the patient, up to maximum number per hour (e.g. in patient-controlled analgesia), or fluids whose volumes vary by the time of day

Syringe Pump

Portable Automated External Defibrillator

An automated external defibrillator (AED) is a portable electronic device that automatically diagnoses the life-threatening cardiac arrhythmias of ventricular fibrillation and pulseless ventricular tachycardia in a patient,[1] and is able to treat them through defibrillation, the application of electrical therapy which stops the arrhythmia, allowing the heart to reestablish an effective rhythm

External Defibrillator

Defibrillator is a device used to perform defibrillation for the purpose of turning abnormal ECG rhythm into normal rhythm. When heart enters into ventricular fibrillation, the process of returning it to its normal sinus rhythm by giving proper amount of external electric current is called defibrillation, and device used in giving such electric current is called defibrillator.

Examination Light

Surgical Light

Single Surgical Light

Double Surgical Light

Printable Surgical Light

LED Headlight

The LED technology Headlight offers cool, bright white light that is ideal for a variety of office-based procedures. With targeted, well-defined illumination and adjustable spot size, our high quality, long-lasting and reliable Headlight will help to improve staff satisfaction and enhance patient care

Operating Table

Our range of electrical operation theater tables provide accurate positioning while ensuring patient's comfort. Made from high quality stainless steel, these tables features can withstand extreme load in every configuration. The modular design of the operating table guarantees ultimate stability with complete safety of the patients. Our range of operating table are available in different models at the most competitive pricing.

Medical Pendant

Single Pendant

Double Pendant

Mobile X-ray System

Mobile X-ray systems are used throughout the hospital from in-patient, to NICU, Operating Room, and Emergency Room imaging. The need for point of care, fast, reliable, and high IQ imaging is growing as technology shifts from analog / CR cassettes to wireless flat panel

X ray Radiography System

X-Ray is the hospital's first impression of a patient. Just like first impressions with people, the first image taken helps set the path going forward. With our start-up mentality, we're focused on reinventing X-Ray to be an intuitive and technologically powerful tool, that helps you deliver greater confidence. Our mind is set on helping you swiftly and carefully determine the right course of action to shape amazing and valuable care — all from that first image.

C-arm Radiography System

A mobile C-arm is a medical imaging device that is based on X-ray technology and can be used flexibly in various ORs within a clinic.

Mammography System

Mammography is specialized medical imaging that uses a low-dose x-ray system to see inside the breasts. A mammography exam, called a mammogram, aids in the early detection and diagnosis of breast diseases in women.

X-ray Film Processor

Automatic processing is the most commonly used method of processing radiographs. The automatic film processor mechanically transports exposed X-ray film through the developing, fixing, washing, and drying cycles. Automatic processing is quicker than manual processing, and it produces finished radiographs of uniform quality.

X-ray Film Viewer

A high-quality X-ray illuminator gives quality X-ray view that produce clearer images for more accurate diagnoses

Portable Ultrasound Scanner

Portable ultrasound is a modality of medical ultrasonography that utilizes small and light devices, compared to the console style ultrasound machines that preceded them. In most cases these mobile ultrasound systems could be carried by hand and in some cases even operated for a time on battery power alone

Digital Ultrasound Scanner

ultrasound (also known as diagnostic sonography or ultrasonography) is a diagnostic imaging technique based on the application of ultrasound. It is used to see internal body structures such as tendons, muscles, joints, vessels and internal organs. Its aim is often to find a source of a disease or to exclude any pathology. The practice of examining pregnant women using ultrasound is called obstetric ultrasound, and is widely used.

X-ray Film Hanger

X-ray Radiographic Cassette

X-ray Film Safety Light

Lead Vest

Lead Coat Apron

Lead Gloves

Lead Screen

Intensifying Screen

Lead Glass

Lead Sheet

X-ray Dosimeter

Hematology Analyzer

An automated analyser is a medical laboratory instrument designed to measure different chemicals and other characteristics in a number of biological samples quickly, with minimal human assistance. These measured properties of blood and other fluids may be useful in the diagnosis of disease.

Chemistry Analyzer

Chemistry analyzers can be benchtop devices or placed on a cart; other systems require floor space. They are used to determine the concentration of certain metabolites, electrolytes, proteins, and/or drugs in samples of serum, plasma, urine, cerebrospinal fluid, and/or other body fluids.

Blood Coagulation Analyzer

Automated coagulation machines measure the ability of blood to clot by performing any of several types of tests including Partial thromboplastin times, Prothrombin times, Coagulometers require blood samples that have been drawn in tubes containing sodium citrate as an anticoagulant

Microplate Reader

microplate readers are instruments which are used to detect biological, chemical or physical events of samples in microtiter

Urin Analyzer

Urine Analyzers. A urine analyser is a device used in the clinical setting to perform automatic urine testing. The units can detect and quantify a number of analytes including bilirubin, protein, glucose and red blood cells

ESR Analyzer

Erythrocyte sedimentation rate (ESR) is the rate at which red blood cells sediment in a period of one hour. It is a common hematology test, and is a non-specific measure of inflammation. ... Since the introduction of automated analyzers into the clinical laboratory, the ESR test has been automatically performed

Other Laboratory Equipment

Hemoglobin Meter

Microscope

Biochemical Incubator

pH Meter

Water Bath

Blood Mixer

Spectrophotometer

Microtome

Electronic Balance

Microcentrifuge

Micro Pipette

Infant Incubator

A neonatal incubator is a rigid box-like enclosure in which an infant can be kept in a controlled environment for observation and care. The device may include a heater, a fan, a container for water to add humidity, a control valve through which oxygen may be added, and access ports for nursing care

Infant Phototherapy Unit

The effect of light on jaundice in neonates, and the ability of light to decrease serum bilirubin levels,

Other Neonatal Equipment

Air-oxygen Blender

Infant Oxygen Hood

Infant T-piece Resuscitator

Jaundice Detector

Neonatal Eyeshade

BVM Resuscitator

Low Pressure Aspirator

Infant Head Fixing Unit

Dental Chair

A dental engine is a large chair-side appliance (often including the chair itself) for use in a dentist's office. At minimum, a dental engine serves as a source of mechanical or pneumatic power for one or more hand-pieces.

Dental X-ray System

Dental X-rays help dentists diagnose common problems, such as cavities, gum disease and some types of infections. Radiographs allow dentists to see inside a tooth and beneath the gums to assess the health of the bone and supporting tissues that hold teeth in place.

Portable Dental X-ray

Wall Mounted Dental X-ray

Mobile Dental X-ray

Panoramic Dental X-ray System

Panoramic radiography, also called panoramic x-ray, is a two-dimensional (2-D) dental x-ray examination that captures the entire mouth in a single image, including the teeth, upper and lower jaws, surrounding structures and tissues. The jaw is a curved structure similar to that of a horseshoe.

Other Dental Equipment

Dental Cabinet

Image Sensor

Dental Developer DXM-01

Dental Sterilizer

Ultrasonic Cleaner

Water Distiller

Intra-oral Camera

LED Dental Curing Light

Handpiece

DENTAL

MEDICAL OPTOELECTRONICS

Endoscope Video System

An endoscopy is used in to look inside the body The endoscopy procedure uses an endoscope to examine the interior of a hollow organ or cavity of the body. Unlike many other medical imaging techniques, endoscopes are inserted directly into the organ

Operating Microscope

An operating microscope is an optical microscope specifically designed to be used in a surgical setting, typically to perform microsurgery

Colposcope

Colposcopy is a procedure to closely examine cervix vagina and vulva for signs of disease

ENT Treatment Unit

E.N.T treatment Unit in which the required tools for spray, vent & anti-fog function to be used for the medical examination & treatment of ear, nose and throat are installed. It is installed with Anti-fog system. It can be used with ENT chair and visual system

Other Medical Optoelectronics

Audiometer

ENT Examination Station

ENT Diagnostic Set

Laryngoscope

Otoscope

Ophthalmoscope

EMG

EEG is most often used to diagnose epilepsy, which causes abnormalities in EEG readings. It is also used to diagnose sleep disorders, depth of anesthesia, coma, encephalopathies, and brain death. EEG used to be a first-line method of diagnosis for tumors, stroke and other focal brain disorders

ECG

An electrocardiogram (EKG or ECG) is a test that checks for problems with the electrical activity of your heart. An EKG shows the heart's electrical activity as line tracings on paper. The spikes and dips in the tracings are called waves. The heart is a muscular pump made up of four chambers .

TMT Unit

The exercise stress test -- also known as an exercise electrocardiogram, treadmill test, graded exercise test, or stress EKG -- is used most often. It lets your doctor know how your heart responds to being pushed

Autoclave

Each instrument or piece of medical equipment which comes into contact with a patient is a potential source of infection. Minimize the risk of exposure to infection for each patient and provider. Sterilization by steam under pressure ensures complete elimination of all forms of microbial life. Sterilization

PHYSIOTHERAPY

Physical therapy (PT), mostly known as Physiotherapy, is a primary care specialty in healthcare that, by using mechanical force and movements [Bio-mechanics or Kinesiology], Manual therapy, exercise therapy, electrotherapy and various physical therapies who practice evidence based treatments, remediates impairments and promotes mobility, function, and quality of life through examination, diagnosis, prognosis, and physical intervention.
