ABOUT US

ANS offering is to manage enterprise infrastructures from an availability, manageability and performance perspective. ANS can help you to manage your complex IT infrastructure by providing the right skills and process based framework to reliably deliver availability and performance of your IT infrastructure.

Our Account Manager will first understand your business objectives, detailed requirements, current service level, organization structure, key roles and responsibilities, and your current infrastructure and stated plans for the future.

We then define Statement of Work, Service level Agreement covering service deliverables, agreed response times, man power augmentation and problem / incident resolution parameters.
