Why Fibertech?

We fabricate almost anything at Fibertech LLC, we use fibreglass as our base material and wood, metal etc to create a final product that is a realization of our customer's imagination. Fibreglass is a durable, non-conductive, and non-corrosive material. The possibilities with this versatile material are endless and all you need to do is choose what you want we are here to execute it with precision and perfection.

PLANTERS - GRP/GRC

GRP/GRC pots and planters will look great in any home or garden setting. The sophisticated bespoke designs suit the clean lines of contemporary architecture and planting. It has a similar density to concrete products but is much lighter due to the thinner material used. The strengthening fibres help to ensure that the pot is robust.

Get your indoor space or garden to fit the aesthetic that you love with our different finishes: Matte, Gloss or Textured.

Design doesn't have to be expensive or complicated, it should be smart and user-friendly.

COUNTERTOPS

GRP countertops can be a fast, effective solution to providing counters and counter display units to a reception, bar or even a mobile storefront. Due to the versatility of GRP products and the nature of the manufacturing process, the possibilities of different applications are potentially limitless. We even do decorative and bulkheads for customized requirements.

CANOPIES

GRP canopies are both lightweight and durable and are made from glass-reinforced polyester making them the simple solution. From apex and flat to the lean-to, hipped and bespoke, we provide the widest range of styles, making them suitable for planned maintenance, refurbishment and new build projects.

FALSE CEILINGS

When there is a complicated false ceiling that needs to be dimensionally strong, fibreglass is the only option. GRP false ceilings ensure safety as they are fire-retardant and durable.

They can also be made aesthetically pleasing with a smooth matte or glossy finishes and even intricate designs, shapes or curves can be fabricated in this material, the design possibilities are infinite with fibreglass.

Accidental leaks from AC ducts or any spillage from fire extinguisher sprinklers which is a likely situation on a false ceiling, will not be a concern with a fibreglass false ceiling since they are 100% waterproof and completely non-reactive to moisture, almost all chemicals and can even withstand high temperatures.

Fibreglass can be fire retardant if required, by using fire-rated resins, this adds up to many other reasons why fibreglass has to be used on false ceilings.

SEATING

The inherent properties of fibreglass allow it to be used for many aesthetic and functional purposes, from the production of spectacular focal pieces of interior design, to architectural mouldings or as practical furnishing products.

GRP seatings can be customized extensively, they can come with inbuilt planters, and shelves and in any shape, size, colour or finish.

CLADDING

Claddings are another one of our specialities. We can customize the cladding according to your needs, in any shape or form so that it adds to the ambience of your space. With the right execution, we guarantee that even an eyesore can be turned into a desirable attraction.

LANDSCAPING

Due to the durability and versatility of fibreglass, fibreglass products are perfect for landscaping requirements. These provide the very best aesthetic value while also being cost-effective and practical.

Sculptures are a major part of landscaping, we have quite a few years of experience in building moulds for different sculptures, and the bunny is just one of many examples. Building moulds for sculptures requires meticulous details and expert craftsmanship to deliver the best results.

GRP and GRC landscaping products can be customized according to your preferences so you can build the space you have dreamed of.

Fibertech LLC's in-house experts can guide clients through the selection process and will deliver the best final results in the industry through precise engineering and quality workmanship.

DECORATIVE PIECES

With the versatility of fibreglass the possibilities are endless and it enables us to make a variety of products that would otherwise be a strenuous task. We manufacture unique decorative pieces with precision and perfection.

DOMES

Domes are magnificent architectural structures which are used in a variety of buildings like palaces, shopping centres, universities etc they are specially designed to match the custom and heritage of the Gulf region.

The strength and lightweight properties of the construction complement the ease of installation at a reduced cost.

MANUFACTURING

In our 20,000 square feet factory, with over 6,000 sq feet of covered production facilities, we have successfully designed, manufactured and delivered several simple and complex projects, which even include landmark projects such as parts of the Saudi Pavillion in Expo 2020, Dubai Creek Harbour, Yas Waterworld, Sea World Abu Dhabi, Yas Arena and many more.

Fibreglass is an immensely popular material used across a range of industries that almost everyone has heard of. It's lightweight, stronger than most traditional materials, and can withstand extreme environments without corroding, buckling, or warping.

HAPPY CUSTOMERS

Why Fibertech?

We have designed, & fabricated Inner shells for Armored vehicles, Ambulances, Security Vehicles, Special Purpose vehicles etc. with GRP, because it is the best light weight, High strength materia

FIBERGLASS/GRP VEHICLE BODYPARTS

GRP is a proven time-tested alternative material for vehicle parts which require low weight yet High Strength. Many Armored & special purpose vehicle manufactures around the region are our satisfied customers for many years.

CARBON FIBER BODY PARTS

Carbon fiber is a remarkable material, this polymer is renowned for its light weight and extreme strength, making it the perfect material for manufacturing parts of special purpose automotive. The obvious benefit of using carbon fiber is safety. Carbon fiber is 5 times lighter than steel, thus there is a substantial reduction in weight without compromising the strength.
