COMPANY PROFILE

AL MAHRain BLDG. MAT. TR. CO. LLC

Dear Sir,

With regards, we would like to introduce ourselves as Importers, Stockist and Suppliers in name and style of AL MAHRain BLDG. MAT. TR. CO. LLC., based at Sharjah since in 2006 and successfully completed 10 years. It was formed to cater the needs of Plumbing items, A/C parts, Electrical items and other items for construction industry. Now we are one of the leading building material trading and marketing company in UAE.

We are glad to introduce our division – Pumps Division - dealt with all the leading brands of Water pumps in Europe. Our expertise in Engineering, especially in the selection of pumps exactly as per the client's specifications, suitable for their applications, have satisfied many customers. Moreover, we also have the fabrication facility to assemble the Packaged Pump sets (Pumps assembled with Control Panel and base frame, painted & wired) according to the client's requirements; such as Transfer, Booster, Submersible, Circulating, etc... for all applications like Residential, Commercial, Industrial, etc..., which we have already supplied to many reputed projects.

We feel proud to be one of the pioneers to introduce the currently most demanded C-FIXmbm pipe supporting system for the application of cold and hot water supply & C-FIXmbm Stainless Steel Floor Gratings.

The market reputation & customers' confidence and trust built-up on us, due to our quality products and services encouraged us to expand area of our operations. Hence, AL MAHRain BLDG. MAT. TR. CO. LLC. was formed as a specialized Trading & Marketing company in the field of Pipe supporting items and other items for domestic & commercial needs and also in the field of Water Pumps.

Our principles are worldwide well known for their standard products and represented by us here on exclusive basis. Our products are mostly approved by the leading consultants.

We request you to provide any of yours current enquiries regarding our product range that will enable us to provide you the best product and quote you our best and most economical prices to suit your budget.

We assure you our very best services always, at any time and look forward to have a bright business future with you for our mutual benefits.

the ultimate trading partner

Pump Division caters to the requirement of pumping system of the contractors. Contractors can be broadly classified into MEP contractors, Irrigation contractors, Air conditioning contractors, STP contractors, Swimming pool contractors etc. Though the general assembly and materials used are similar, the logic of operation differs from case to case basis. Depending upon application, the packaged pump sets are divided into the following categories.

BOOSTER PUMPS

These are used to increase the pressure of the water being pumped. As an example, take the case of a four-storied building, where water tank is situated on the top of the roof. The pressure of water will be sufficient up to the third floor, but the top floor will not have enough pressure. Here we have to fix a pump to increase the pressure. In some cases, it will not be possible to construct a water tank on the roof due to various reasons. In such cases we have to install a pump to provide water to all out lets. For irrigation pumps also the basic principle is the same, however, we have to increase the pressure which is compatible with the sprinklers, drip, solenoid valve etc used for irrigation.

TRANSFER PUMPS

This is used to lift water from one tank to another, may be from a ground tank to an overhead tank. The construction is similar to the booster pumps, with some variations. Here pressure switch and pressure tank are absent. The operation of the pumps is controlled by either the float switch kept on the OH tank or timers. If the pump is controlled by float switch, the pump will start when float is at a lower level and stop when it is at higher level. If the pumps are controlled by timers, the pump will continue to work as per the timer settings.

CHILLED WATER PUMPS

They are used in AC application. In multistoried buildings, air conditioning is based on chilled water principle. Chilled water pumps circulate the water through the pipes and heat exchanger. They are generally large end suction or Horizontal split casing pumps running at 1450 rpm. The pumps are coupled to the motors and supplied as one unit.

SEWAGE PUMPS

These pumps are used for emptying sewage pit, storm water or drainage applications. There are different types of sewage pumps. Sewage pumps are used for building services and treatment plants. Generally pumps are supplied with a control panel that is different from the above-mentioned panels. Four float switches, placed at different levels in the tank, control the logic of operation. The panels are fitted with audiovisual alarms.

SOLAR WATER HEATER

Solar System is ecologically friendly, economical, simple, Aesthetic, Effective & Autonomous.

ELECTRICALS

This division deal with all the leading brands of Electrical materials. Our expertise in Engineering, especially in the selection of plumbing materials exactly as per the client specifications, suitable for their applications, have satisfied many customers.
