

البيت الازرق لطلاء المعادن AL BAIT AL AZRAQ METAL COATING LLC

About Us:

Al Bait Al Azraq Metal Coating LLC meets and surpasses the high standards of metal coatings. We are in the business of Coating Industrial Metals, Specializing in Architectural Aluminium, Cast Aluminium, Mild Steel and Galvanised Products. We have gone ahead as a professionally managed Powder Coating factory. All the materials coated by us have to go through a strict quality testing procedure. We assure a tough and durable coating. We have a monthly production capacity to coat about 350 Metric Tons of Aluminium. Range of coatings can be applied to Curtainwalls, Window Frames, Facades, Louvers, Slidings, Canopies, Wall Panels and other building components with virtually no limits.

METAL COATING LLC

Coating Procedures:

- I. Cleaning and pretreating of material.
- II. Powder Application: After cleaning drying off the work pieces are directly powder coated through an automatic powder spray booth supported with GEMA Super Corona guns.
- III. After Powder coating, the substrates, go through the curing oven at a temperature of 200°C for 10-15 mins, according to the powder specification.
- IV. The final process is to ensure the quality of the Product through visual inspection and laboratory tests according to the Qualicoat standards, then packaging with Polyethylene film, bubble & corrugated sheet as when required to protect the coated surface.

Our Quality Control Procedures:

1. Colour Comparision : To insure the colour matching with the reference samples.
2. Gloss Test : According to ISO 2813 (Using incident light 60 degree), then compare the results with the required values.
3. Film Thickness : According to ISO 2360, this test is done by using film thickness gauge to ensure the film thickness in a range of 60 : 90 microns or according to powder specification.
4. Adhesion Test : According to ISO 2409, by using cross hatch cutter with 2mm blades gaps to insure the adhesion between powder and substrate surface.
5. Pencil hardness Test : According to ISO 15184, by using Pensils with various hardness values to insure scratching resistance.
6. Impact Test : According to ISO 6272, by using Impact Tester to insure the coating resistance for Impact action without failure.
7. Bending Test : According to ISO 6860, by using conical mandrel to insure the flexibility of the coating when bending action happens.
8. Resistance to Humidity : To ensure the humidity resistanse for the coating by using a special weather stimulator for 1000 Hours.
9. Salt Spray Test : By using salt spray cabinet for 1000 Hours test period to insure salty media resistanse for the coating.
10. Boiling water Test : 2 hours immersion in boiling demineralised water (maximum 10 μ S at 20°C).
11. Cupping Test : ISO 1520 followed by a tape pull adhesion test The quality test number 8 and 9 are made in Jotun Laboratory in Dubai. Jotun Quality Tests Reports will be producted on request.
