At **Pure Diesel** we take pride in providing our customers with excellent service and quality products at competitive rates. 24/7 **Pure Diesel** has staff on-call 24 hours a day and 7 days a week we are able to make deliveries around the clock if necessary.

Pure Diesel Fuel Management Services

Managing Your Supply

Pure Diesel is your complete source for fuel supply and logistics management services. We can customize, optimize and maximize a complete fueling solution to keep your business thriving. **Pure Diesel** can meet your needs no matter how big or small they may be.

Pure Diesel Service

The broad range of services we offer our customers includes: commercial mobile and bulk fueling; the packaging, distribution and sale of diesel; integrated out-sourced fuel management; transportation logistics and emergency response services.

Why suggest for Green Diesel?

- Green Diesel fuel is environment-friendly, and will help to improve air quality by significantly reducing emissions.
- Ultra-low sulfur diesel fuel allows the use of advanced technologies to reduce harmful pollutants. The use of catalytic converters and particulate filters can be utilized to nearly eliminate nitrogen oxide (NOx) and particulate matter (PM) emissions.
- The transition to ultra-low sulfur diesel fuel will now allow light duty diesel vehicles to meet the stringent emission standards as light duty gasoline vehicles.
- Diesel engines are 20-40% more efficient than gasoline vehicles using the lower sulfur diesel fuel.
- The boost of efficiency in diesel vehicles utilizing Green Diesel will increase the demand and in return more diesel vehicles will be on the road. Infrastructure that is currently in place can easily be used with this new ultra-low sulfur diesel fuel.
- Green Diesel fuel enables the use of cleaner technology diesel engines and vehicles with advanced emission control devices, resulting in significantly improved air quality. Annual emission reductions will be equivalent to removing the pollution from more than 90 percent of today's trucks and buses, when the current heavy-duty vehicle fleet has been completely replaced in 2030.
