ACRYLIC FABRICATION

LASER CUTTING

ACRYLIC ENGRAVING / ETCHING

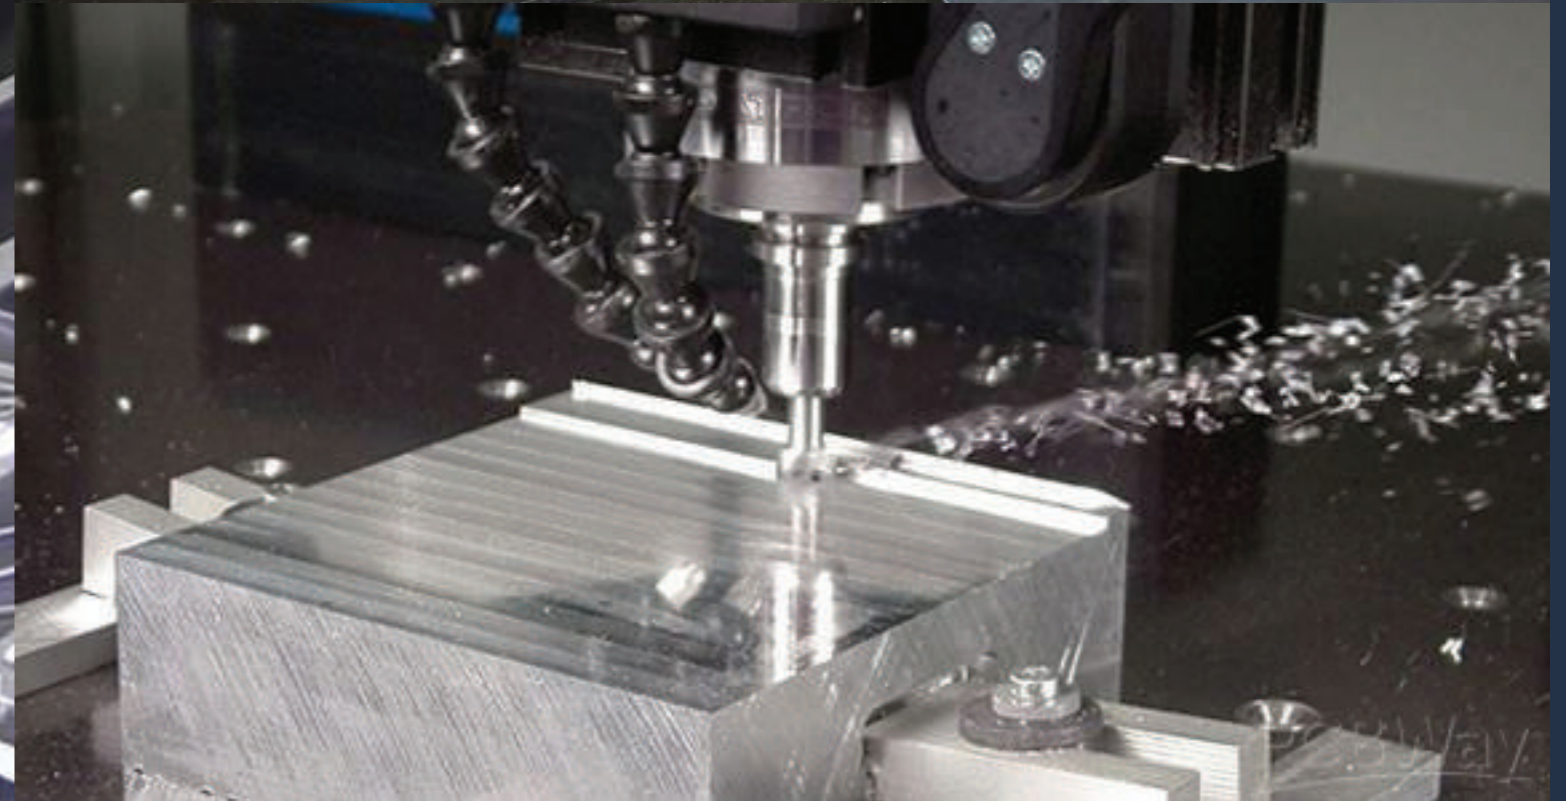

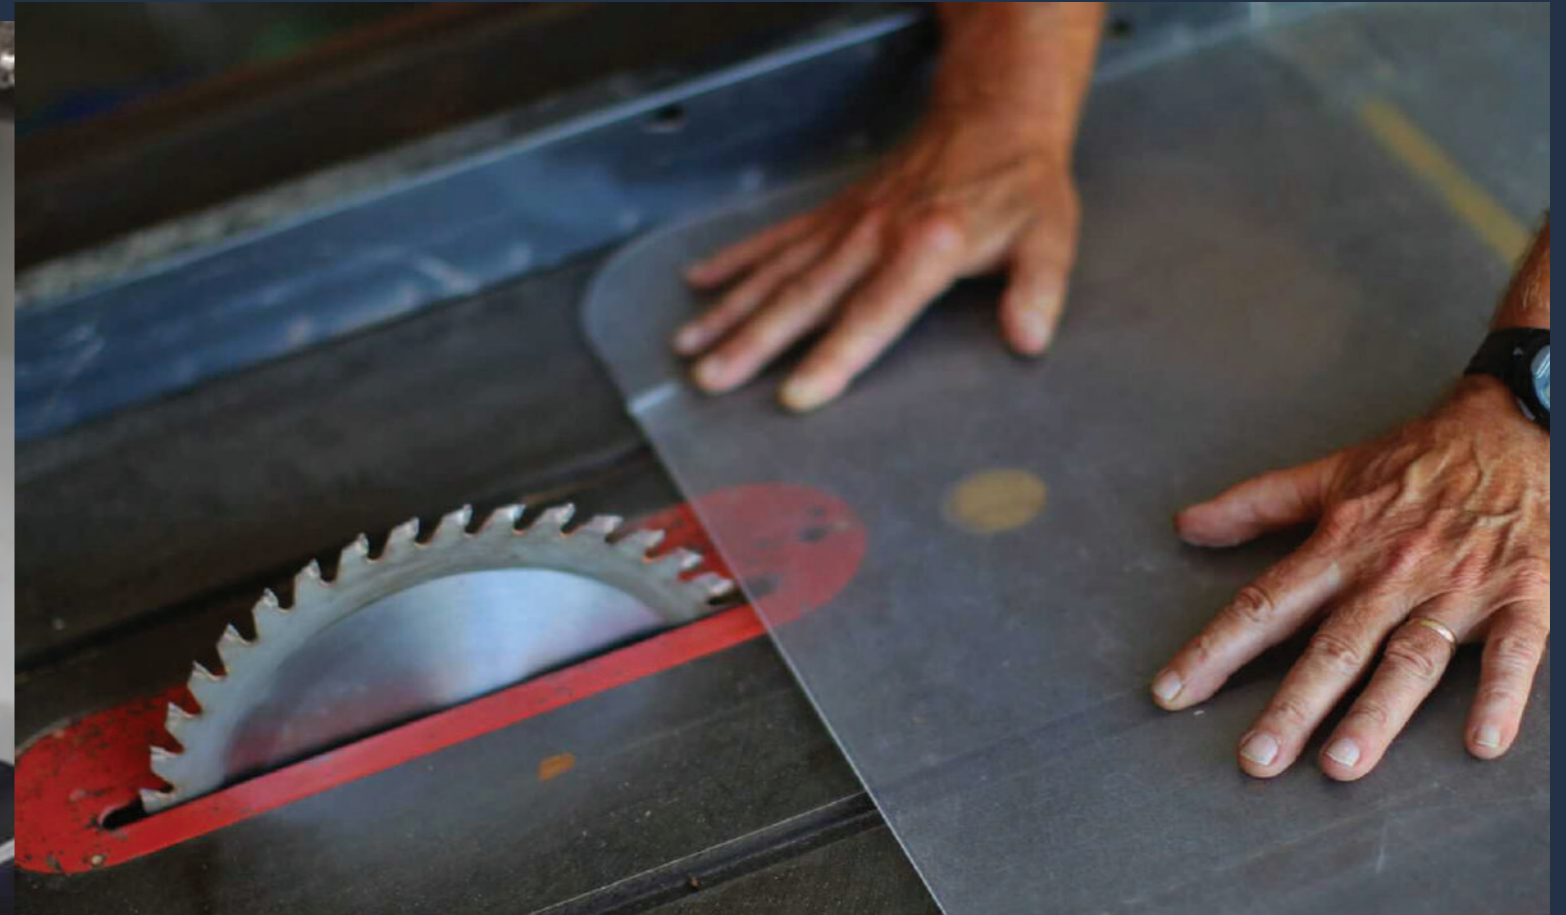

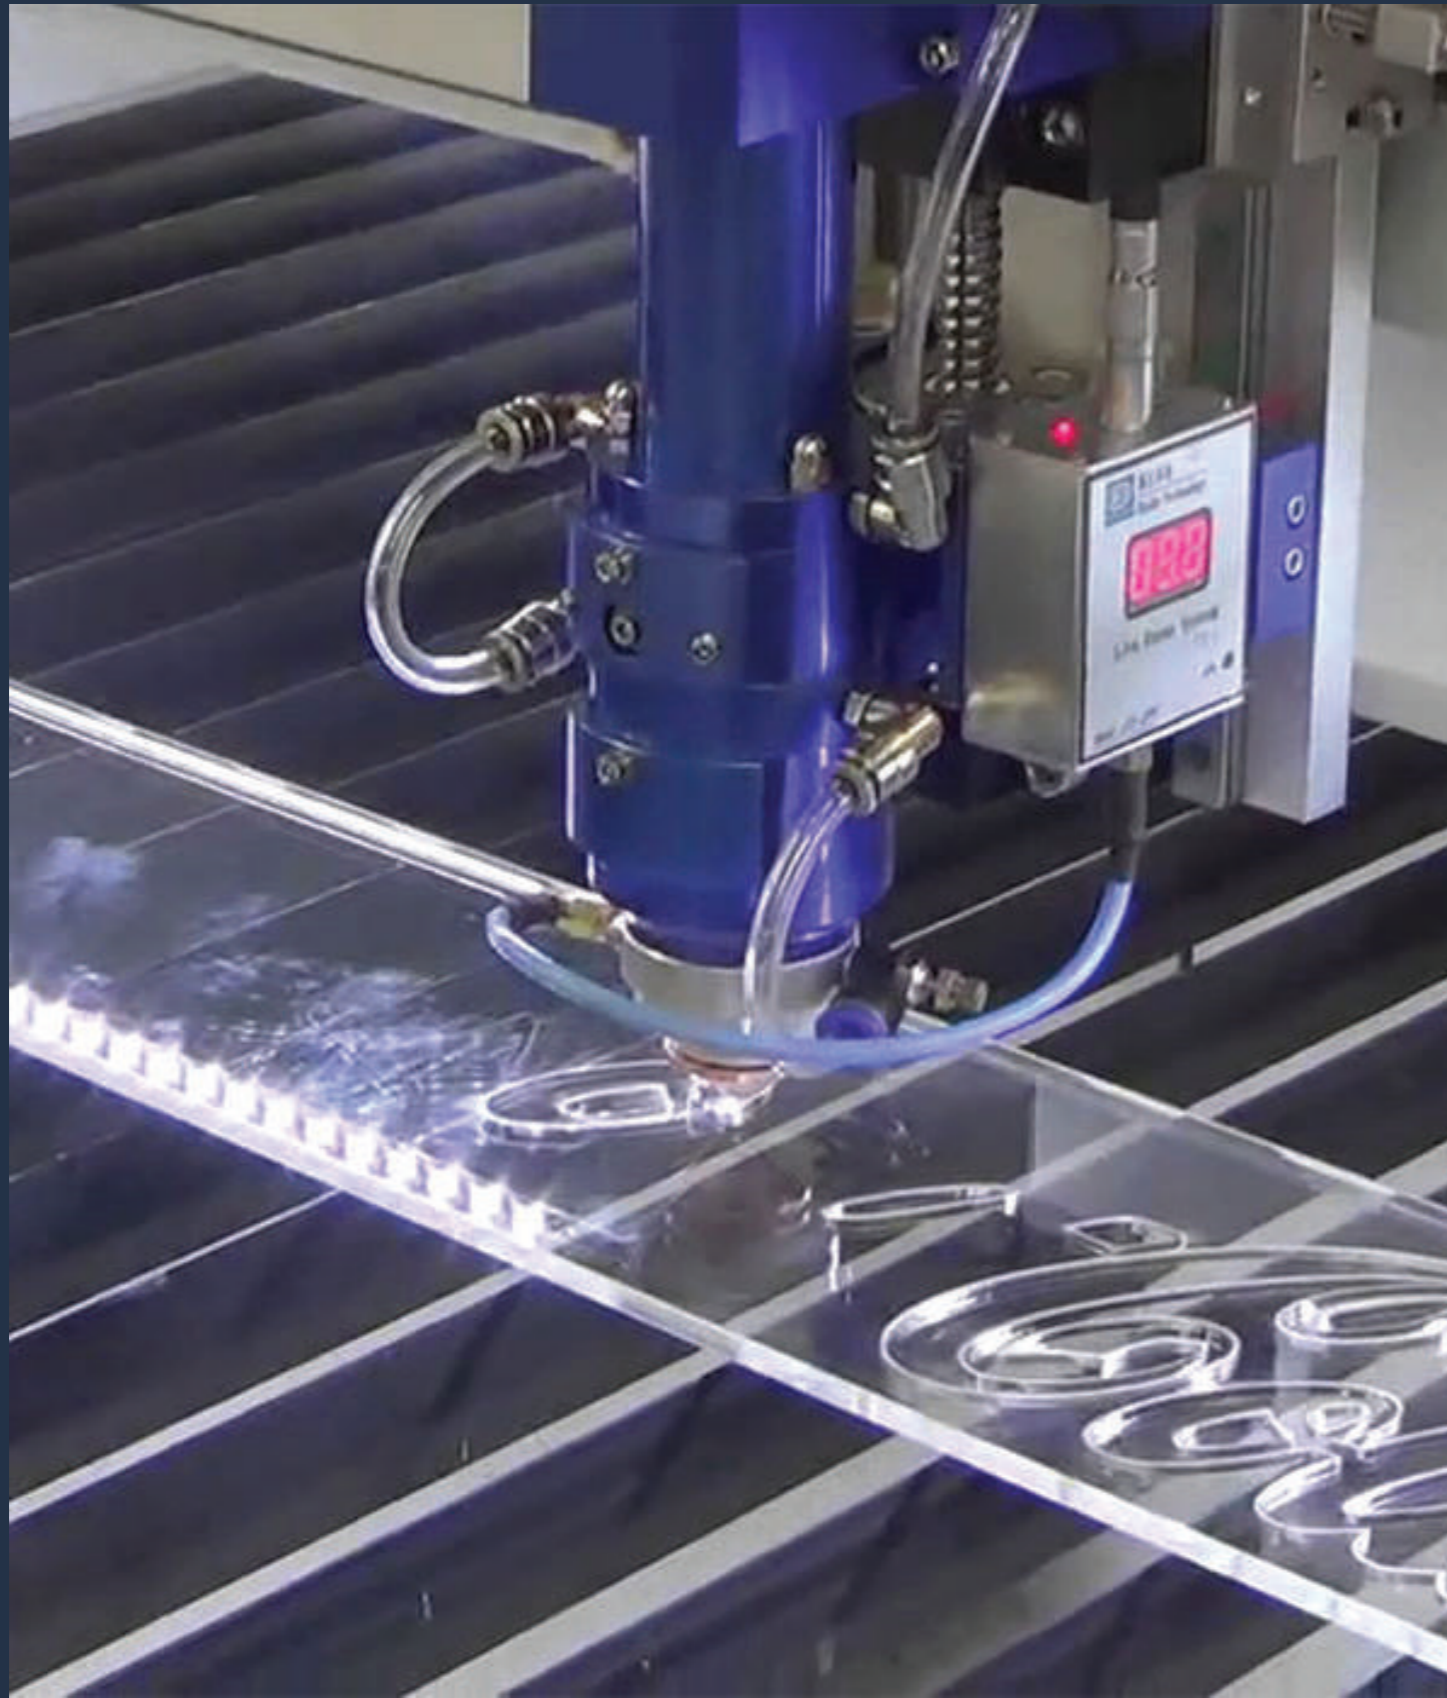

ACRYLIC BENDING

ACRYLIC MOULDING

ACRYLIC POLISHING

Acrylic Laser/CNC/Manual Cutting

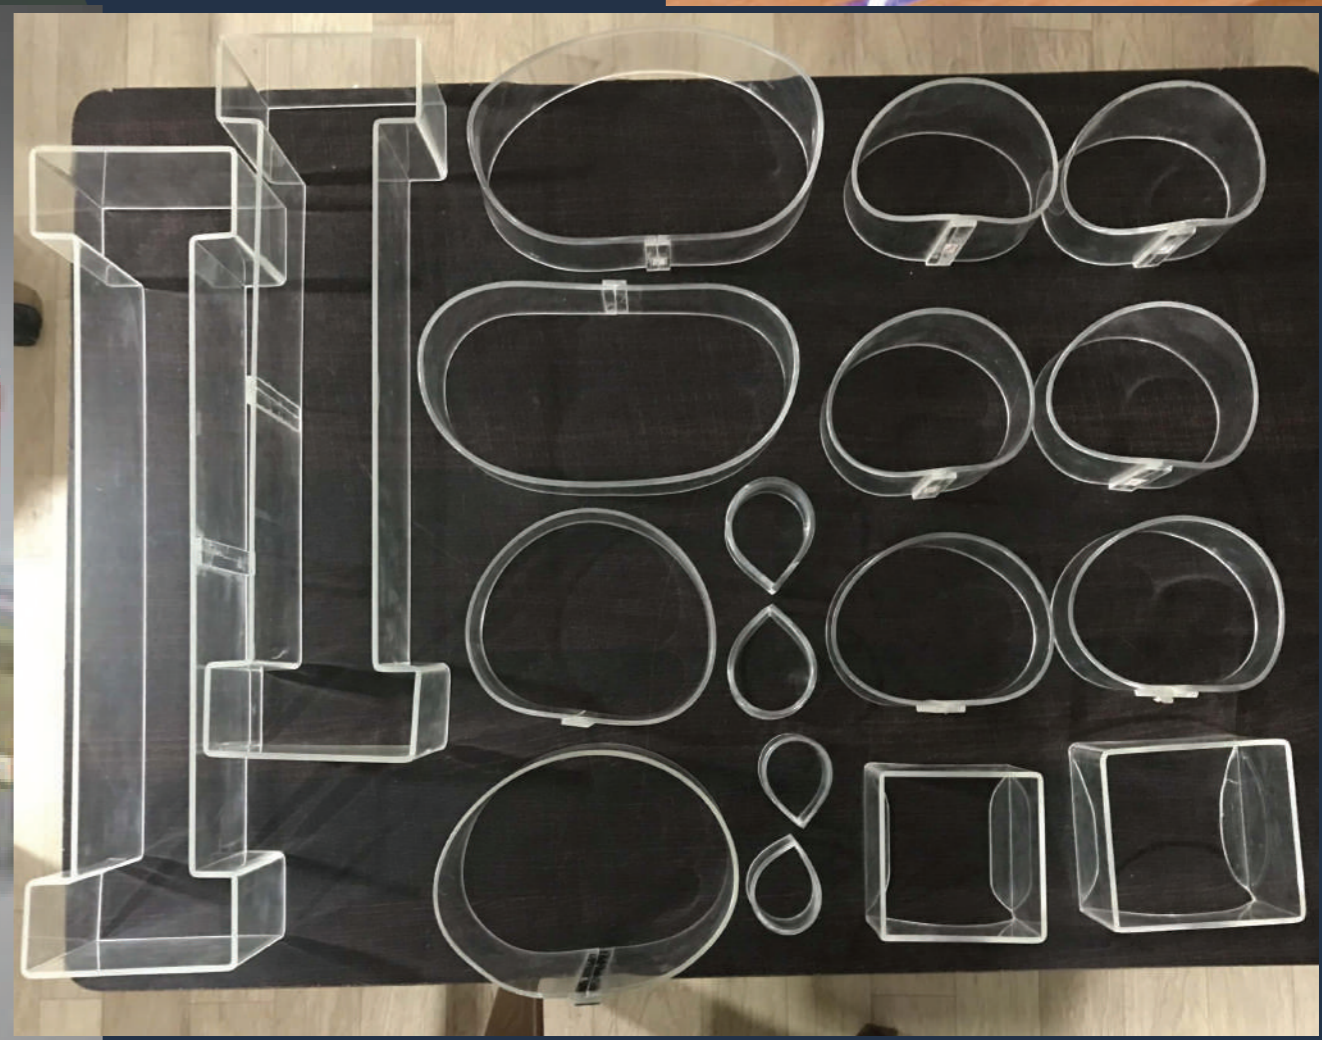

ACRYLIC GALLERY

Laser cutting is a process of cutting forms or designs into sheet metal or other structural materials that is most commonly employed in the manufacturing business, but it is also gaining favour in other sectors such as schools and hobbyists. A precise method of cutting a specific pattern from acrylic material using a CAD file as a guide. In other terms, it is a digital subtractive creative approach that uses a laser to cut or engrave a specific material.

ACRYLIC BENDING / MOULDING / POLISHING

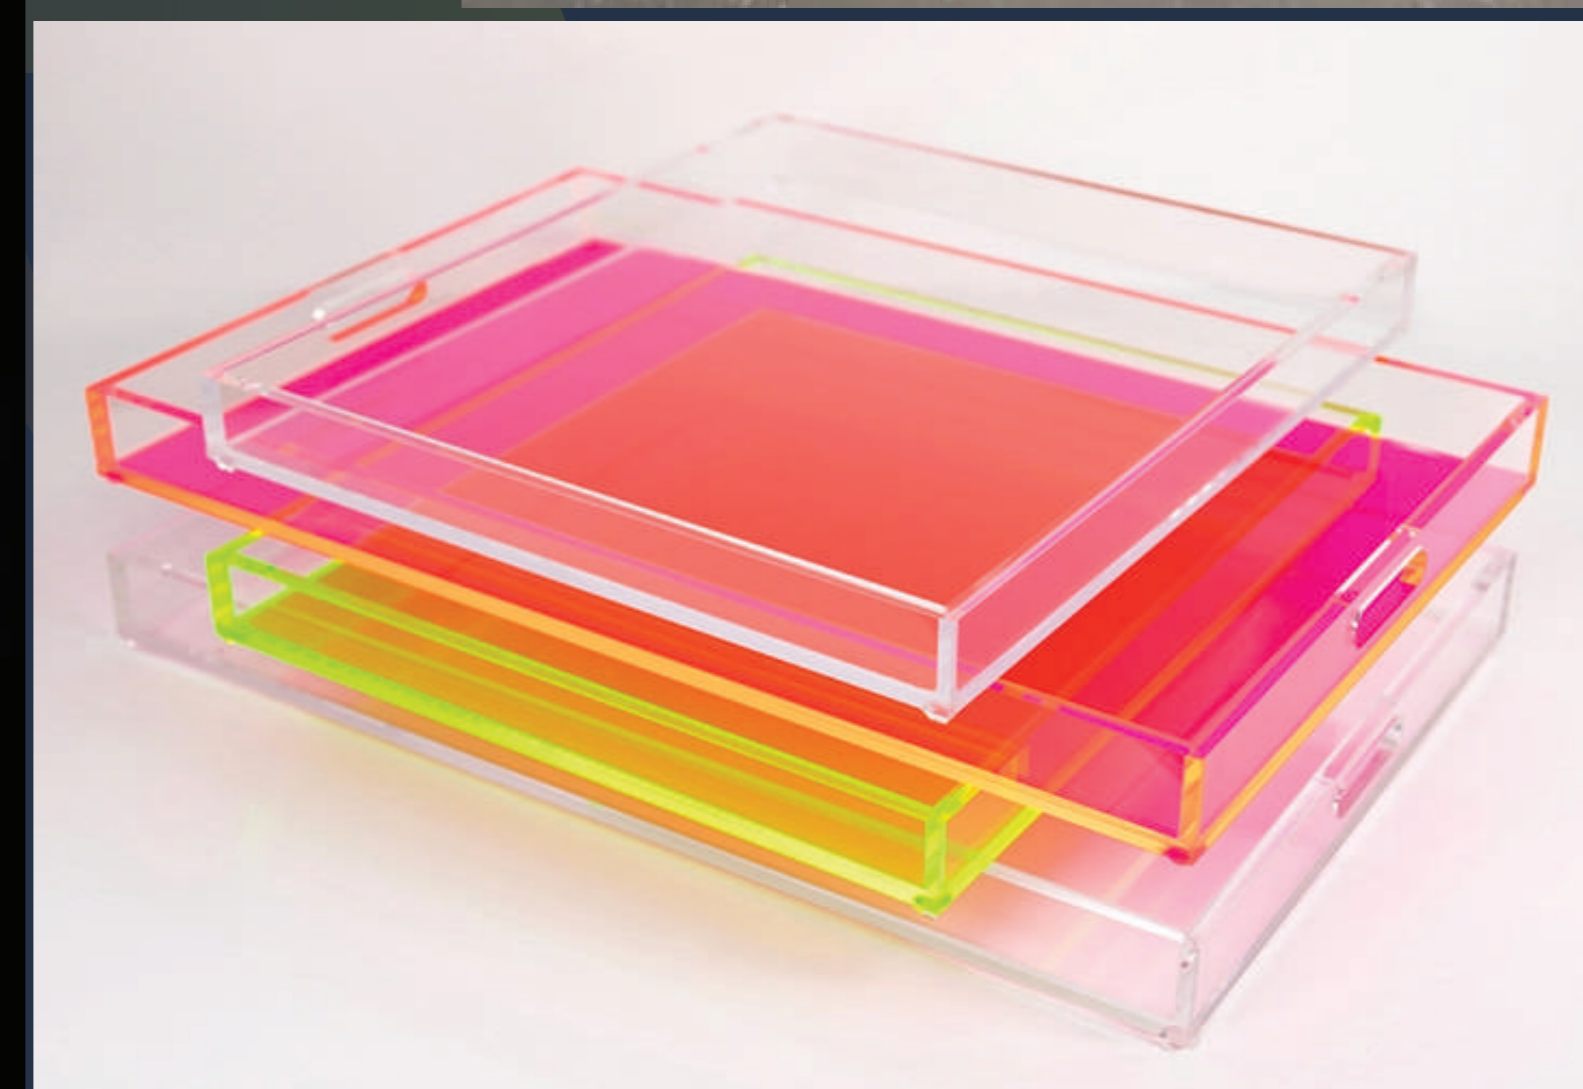

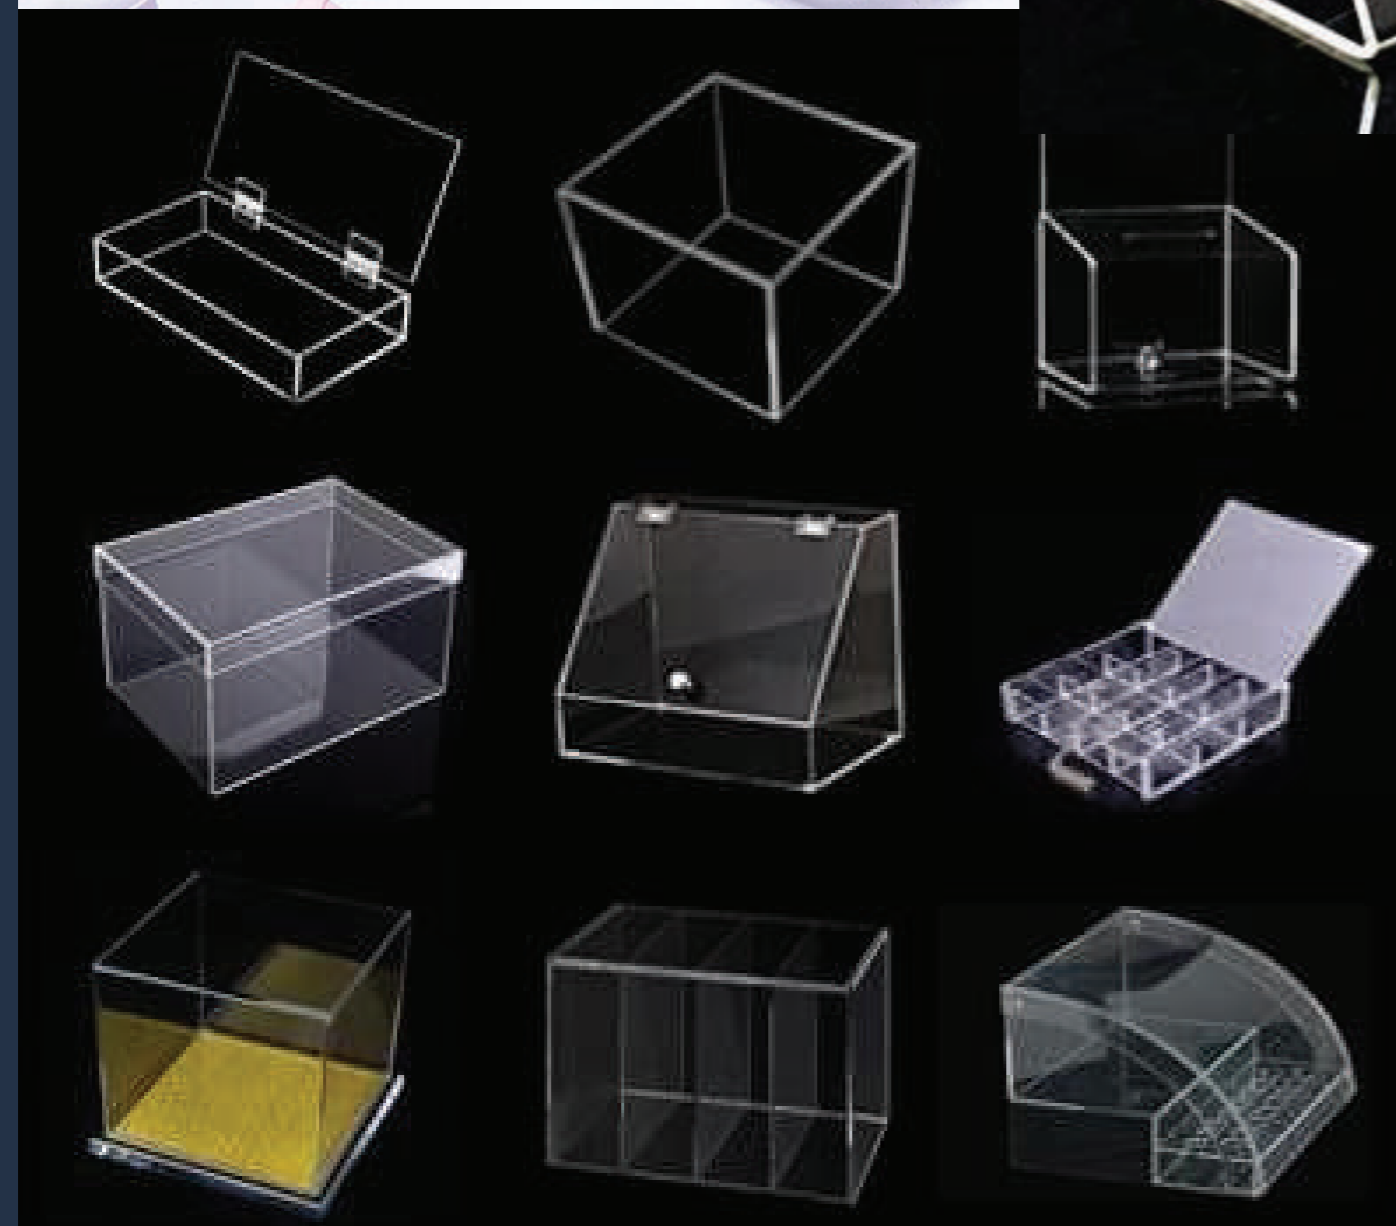

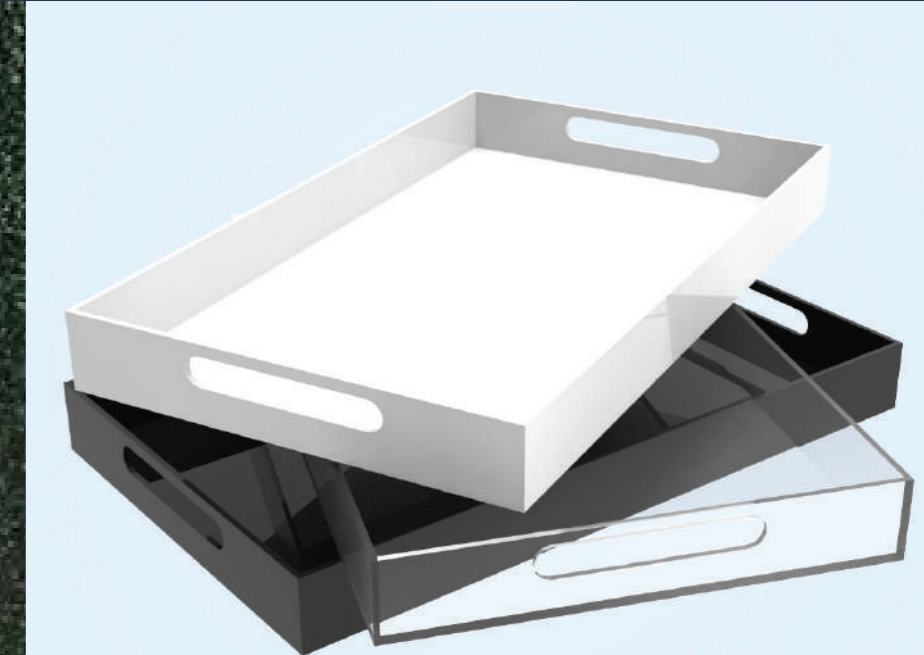

ACRYLIC GALLERY

Acrylic bending is accomplished by heating the acrylic sheet, which causes the heated portion to become thermoformable and so bendable. Acrylic softens and bends easily when heated to 160 degrees Celsius. It's best to continue with caution. To avoid damaging the material on the outside of the fold, bend the acrylic slowly and softly. Heat the acrylic on the outside of the fold line briefly after bending it to seal it correctly.

ACRYLIC BOX/TRAY/DISPLAY PRODUCTS

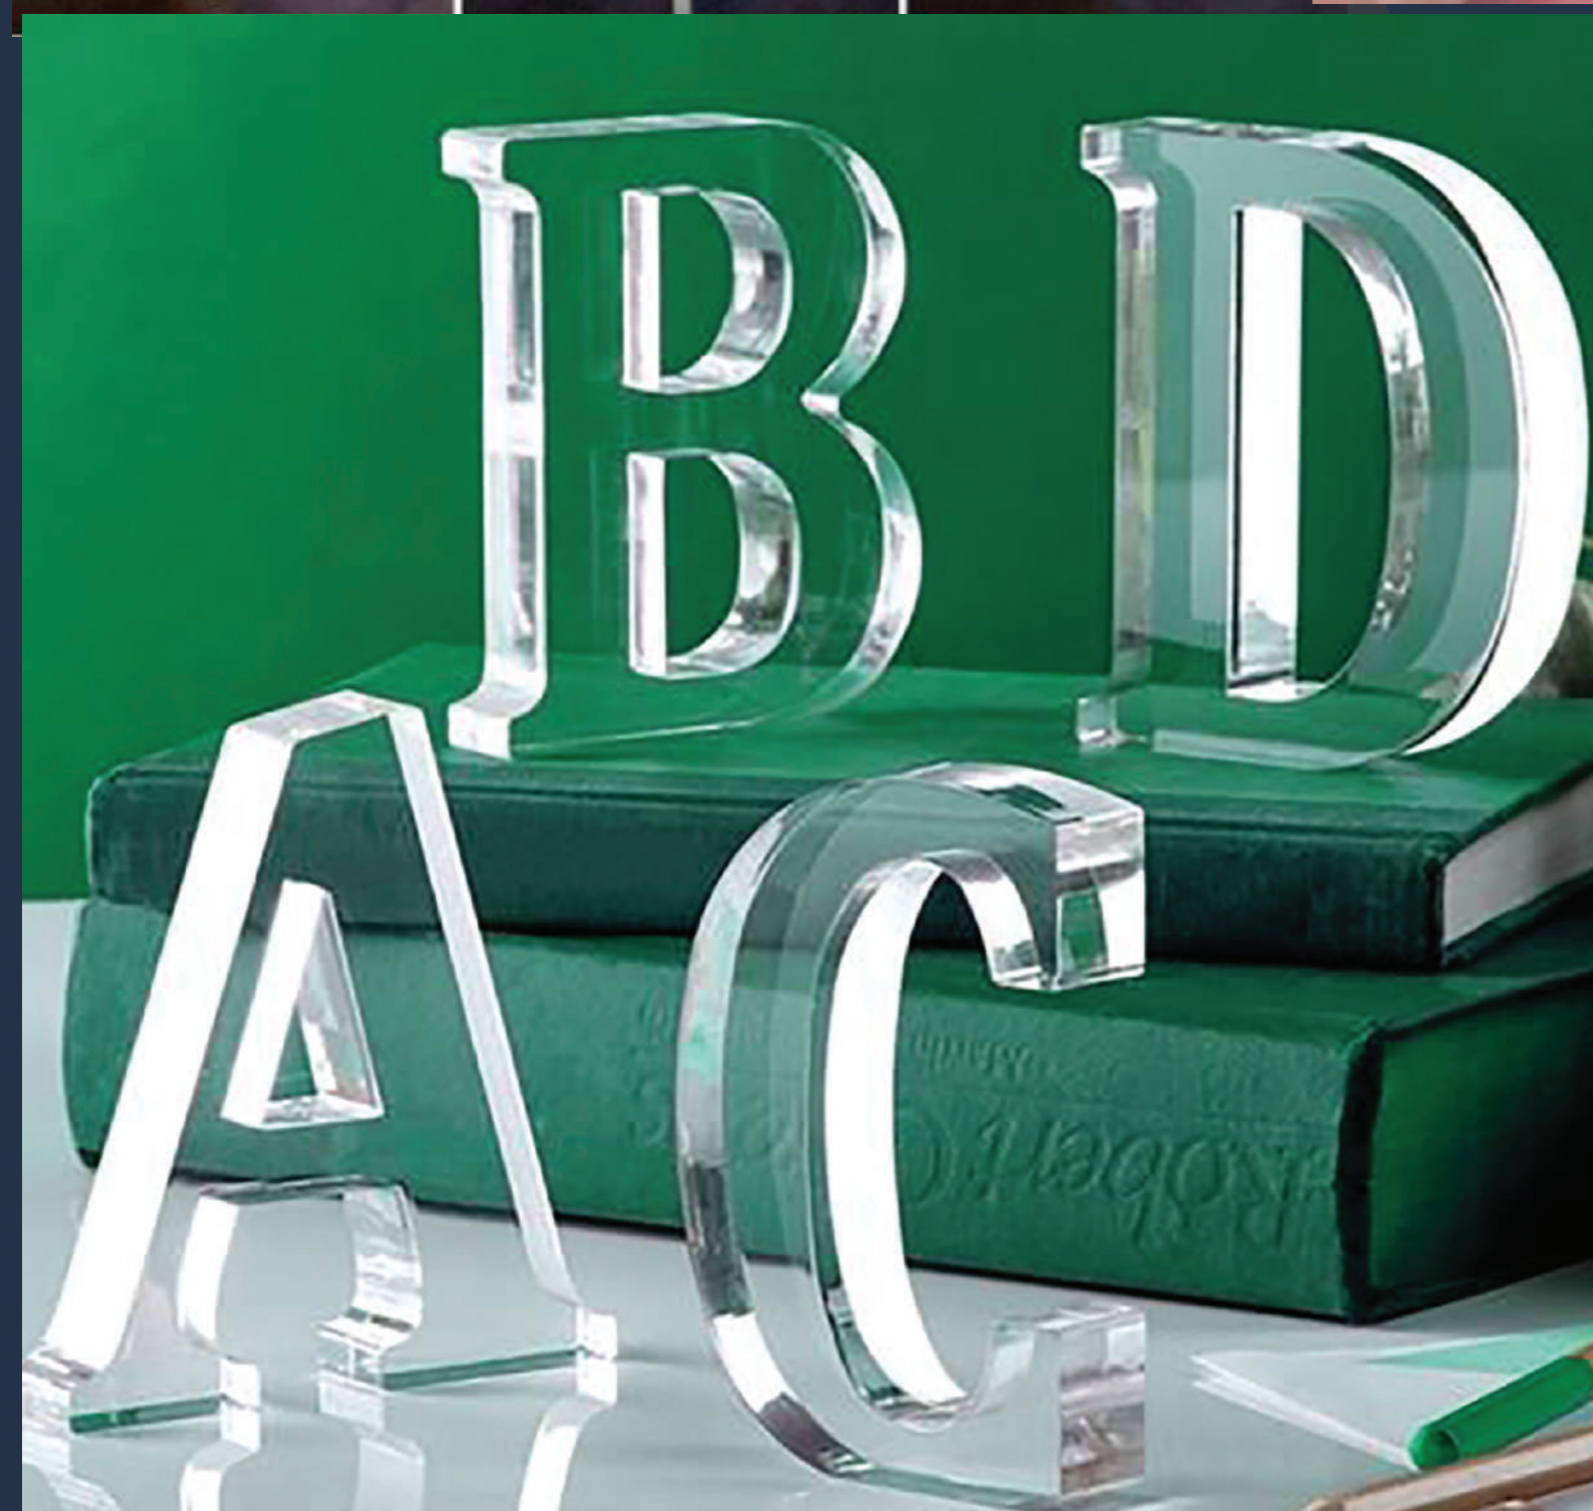

ACRYLIC GALLERY

Rigid and clear Acrylic boxes poses as great storage space and can fit in the room anywhere. It is also a great display box to decorate your home. All purpose clear acrylic box can be used in Shops and Kitchen Display items to hold heavy weighing objects and gives everlasting life.
