CONTAINER CONVERSION

OFFSHORE CONTAINERS

An offshore container built for the transport of goods, which can include general cargo containers, cargo baskets, special containers, boxes and gas cylinder racks. Offshore portable tanks are also included in this category. These are used to transport dangerous goods used offshore, and must also meet the International Maritime Dangerous Goods Code.

OFFSHORE WASTE SKIP

ISO TANKS

ISO tanks are a well-proven, versatile and safe method of transporting bulk liquids across the globe. The intermodal design (suitable for rail, road and sea) means the liquid they are carrying does not have to be transferred at different stages of the logistic chain as it would with road tankers, tanker vessels or rail cars.

Although there are a range of capacities possible, the most commonly found ISO tanks can carry 24-26kl within a standard 20ft frame design. The vessels are generally Stainless Steel, wrapped with a layer of mineral wool insulation and GRP/aluminium cladding

There are many advantages to using ISO tanks for Bulk liquid transport including:

EFFICIENCY

SAFETY

VERSATILITY

SUSTAINABILITY

DNV OFFSHORE CONTAINERS

Boxhub is a leading supplier of DNV offshore containers that provide a durable and reliable solution for offshore cargo transportation and storage.

Our containers are designed to withstand harsh offshore conditions, including extreme weather, corrosive saltwater, and impacts that can occur during offshore transfers between ships.

We provide various sizes and modifications to meet your cargo requirements

- Standard DNV Offshore CCU's
- DNV Reefer Containers
- DNV Half Height Containers
- DNV & ISO Tank Containers
- DNV Baskets
- Offshore Modifications
