

# LAYALI ZAMAN HARDWARE TRADING L.L.C

COMPANY PROFILE

# ABOUT US

---

- **LAYALI ZAMAN HARDWARE TRADING LLC** was formed in April 2003. There was a gap in the market for a professionally Run storage and material handling company. Previously (and generally it is still the case), the Companies who sold racking and shelving along with various other product lines with design Expertise drawn from their overseas principals.
- **LAYALI ZAMAN HARDWARE TRADING LLC** is in our opinion still the only locally based storage and material handling Company with the in-house expertise to carry out the design of complex storage facilities.
- Mr Abdul Mohsin our sales & Technical Manager was brought over from the India with 22 Years of expertise in the industry to enhance the companies' ability to overcome any storage Problem that is introduced to them.

## VISION:

- To be worlds leading and innovative space maker.

## MISSION:

- The long-term goal is to create the best storage and materials handling company in the United Arab Emirates. Layali Zaman is capable of carrying out the design and installation of any type or size of racking or shelving project, any type of automated storage facility, any Type or size of idle roller conveyor installation, carousels or any other form of storage Facility.

# WHAT WE DO?

- **LAYALI ZAMAN  
HARDWARE TRADING  
LLC** Company is the in-house expertise to carry out the design of complex storage facilities.
- We supply & Install all kind of Racking & Shelving Storage Systems with the best quality product Assured.

Upright – vertical member that beams attach to (upright columns or upright frames)

Load Beams (step beams or channel beams), available in both

- Roll-formed
- Structural channel

Pallet Support Bars

(also known as Cross bars or Beam ties)

# SAFETY & HEALTH

- At LZH, we promote safe working practices and as a supplier of a product that has significant safety implications, we work closely with our customers to minimize the probability of accidents.
- Its true to say that you will never see a rack installation looking like the leaning tower of pisa. Racks are either vertical or they fall over, and racks falling over is something that everybody wants to avoid.

# LIGHT DUTY RACKING SYSTEM

- Light Duty Racking System is most popular product in the market these days. It is in great demand for warehouse storage, retail & also for household storage.
- This system specially designed for load between 60kg to 400kg UDL. It allows another level of storage to be created.
- There are two types of light weight Racking system:

Slotted Angle Shelving.

Bolt free Shelving.

# SLOTTED ANGLE SHELVING

- Slotted angle shelving is an efficient storage system used widely in every industry for warehousing and other storage needs.
- This system specially designed for load between 60kg to 400kg UDL. It allows another level of storage to be created.

# BOLT FREE SHELVING

- As the name suggests, boltless shelving is a type of shelving system that can be assembled without the need for nuts and bolts, meaning that it can be assembled and installed without any specialist equipment or knowledge. This makes installation fast, easy and pain-free.
- This system specially designed for load between 60kg to 400kg UDL.

# MEDIUM DUTY RACKING SYSTEM

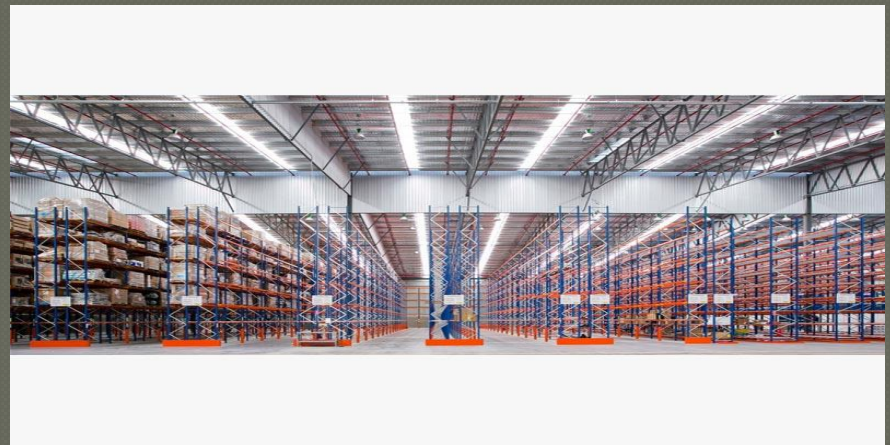

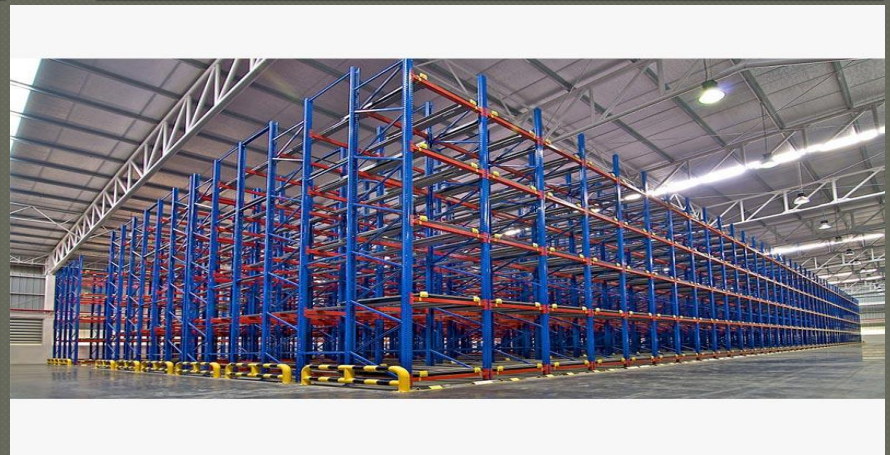

- Medium Duty Racking System is custom-built requirements. Long lasting epoxy finish increases the lifespan of the durable rack system.
- This system specially designed for load between 500kg to 600kg UDL.
- It is also called as long span shelving rack.

# HEAVY DUTY RACKING SYSTEM

- Heavy Duty Racking system is constantly in demand by all warehousing facilities requiring palletized storage & handling. It offers an excellent stock rotation function and only uses 40% of warehouse floor space.
- Heavy Duty Racking System can be setup in single & double-sided runs to suit all forklift and hand pallet trucks, depending on aisle width and maximum load height, the design optimizes vertical space and offers instant access to stock handling.
- This system specially designed for load between 1000kg to 4000kg UDL.

# MEZZANINE SYSTEM

- The mezzanine system is an intermediate floor between the main floor of a building. It is made up SHS column, box beam, solid universal beam or truss type, allowing high density storage within the mezzanine structure.
- The mezzanine system is ideal for maximum space usage to increase company profitability.
- Top flooring can be made of plywood, mild steel plate, perforated metal floor plain or steel grating.

# MOBILE SHELVING

- Mobile shelving, mobile aisle shelving, compact us, roller racking, or rolling stack, are terms applied to shelving or storage units fitted with wheeled traction system. Units can be closely packed when access is not required, but can be readily moved to open up an aisle to allow access.
- Mobile shelving system have rows that move along floor rails until compacted into a smaller-size footprint, giving you more space to store extra paperwork.

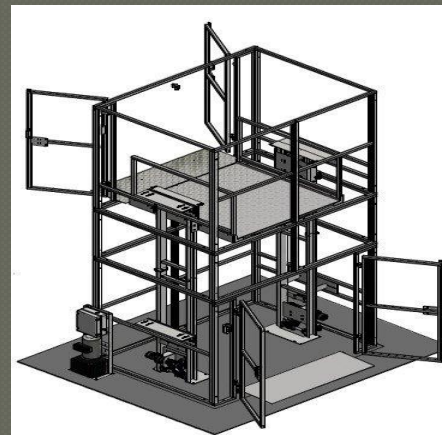

# STORAGE BOXES & CONTAINERS

- Storage boxes or plastic bins are ideal for industrial storage, warehousing, logistics, catering, stockroom and domestic storage.
- They offer space-saving design and allow you to easily organize and identify your products, goods and components.

# FABRICATED MEZZANINE & ALL TECHNICAL WORKS

- A structural steel mezzanine is a partial level intermediate floor in a building, commonly between the ground floor and the roof. The structural framing is fabricated out of structural steel beams and columns. Metal decking is then used on the floor with either concrete or plywood placed on top.
- There are three basic types of industrial mezzanines: custom, standard or modular. A structural engineer is sometimes hired to help determine whether the floor of the building can support a mezzanine (and how heavy the mezzanine may be), and to design the appropriate mezzanine.

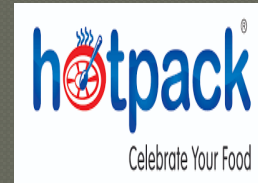

# GYPSUM BOARD

- Also known as plasterboard or drywall, the gypsum board is a technical name given to a plaster-based wall finish that helps in creating light walls. Even though it is an umbrella term, all of its types use gypsum, a non-combustible core, and paper surface covers them.
