STEPS

BATHROOMS

## STEPS

Using marble for stairs means choosing a material with an intrinsic strength, beauty and brilliance that only a stone with its history can possess: a primordial and wonderful story that is revealed through its colors and its many veins and it is even enhanced by the passage of time. We offer the most precious marbles and stones and we transform them in the marble stairs of your dreams for any type of design requirement, always characterized by the taste of a made in Italy product, appreciated throughout the world.

Marble staircases can have various shapes: straight, spiral, helical, cantilever with open riser, etc., in classic or ultra-modern style, finished with classic railings or illuminated by LEDs along the base. They can be small stairs to access the upper floors of a house or monumental staircases for super villas or hotels. The steps that make up the staircase can have various types of finishes to be applied to stair treads and risers that characterize its style. A lath applied to the step embellishes the whole staircase. The embellished and rounded lines are the most suitable for a classic style, the most simple and linear ones for a modern style. In contemporary settings, total white marble stairs are currently in vogue, where the staircase blends in with the furnishings and walls.

## BATHROOM

Al Taj Marble & Tiles offers the best in class when it comes to bathrooms. Our team of experts are available to help with installation and renovation services.

You can be confident that the bathrooms entities finished by us will survive for many years because only the best materials were used in their construction. Additionally, we provide a range of finishes and colours so you can select the ideal one for your house.

When it comes to bathroom entities, there are two main options: marble and quartz. Both materials have their own advantages and disadvantages. Marble is a really attractive material that can give any room a hint of elegance. But marble is an extremely porous substance. So if you're not careful, your marble splashback could easily become damaged and ruined. Quartz is a newer material that is becoming increasingly popular in bathroom entities. Non-porous quartz is a simple, low-maintenance material.

Which should you pick for your bathroom, then?

Marble is a fantastic choice if you want something timeless and exquisite. However, if you are looking for an easy-to-maintain and durable material, then quartz is the better choice.

## FLOORINGS

## FLOORINGS

If it is true that in recent years marble, due to its undisputed technical and aesthetic qualities, has made a comeback in furnishing, it is also true that luxury marble flooring is an element that never goes out of fashion, so much so that it is highly appreciated from the ancient era to the contemporary.

The reasons that make marble flooring timeless are durability and impact resistance on the one hand, but also the ability to show different qualities, colors and shades depending on the furniture and materials around it. The same marble flooring can be successful both in a rustic context and in a hypermodern context, simply playing with the elements with which it is combined. This is why luxury marble flooring is something eternal as well as continuously renewable in many different ways.

If an existing marble flooring is so versatile and can be combined with different furnishings, when it comes to creating new custom marble floors, the choice is immense to say the least. It is not at all easy to extricate yourself from this immense choice and Taj Marble staff is aware of this difficulty. This is the reason why Taj Marble offers a personalized service by guiding the Customer closely in the best choice of material (the block is sometimes selected together in the quarry), color, laying, processing and finishes based on tastes and on the context where the marble flooring will be installed.

## KITCHEN

## KITCHEN

Marble kitchen countertops are the fulcrum of the entire kitchen furnishing and, thanks to the highly resistant characteristics of this material, are capable of making even the simplest kitchen detailed and unique.

Everything starts from the choice of an ad hoc material. Then, the choice of its veins as well as of its treatment and cutting are all aimed at making the top ideal for the kitchen where it must be installed. The countertops for kitchens in stone or marble remain incomparable, luxurious but also marked out by a rustic and traditional allure able to capture attention and to give great character to any space.

In the same way as a marble kitchen table, a marble kitchen countertop also offers stability, high hygiene and endless resistance. Of course, some types of marble tops are delicate and require specific care and attention; yet, they have an incredibly refined and unique appearance.

WALL CLADDING

## WALL CLADDING

The term cladding refers to the application of a material to a non-structural layer placed over the original shell of a building. Thus, a new surface is created on the facade, either at an initial stage such as the design phase, or as a repair solution at a later time than that of the construction of the building.

There are many reasons for choosing to clad the exteriors of a building or even a private house. The main reason is that the cladding offers other types of exciting solutions to shielding the exterior surfaces of a building, with a wonderful range of different finishes that add elegance and durability.

On the other hand, the cladding on the interior walls contributes to the overall design and enhances the aesthetics of the spaces, while also offering a way to protect them against external weather conditions or noise pollution.

There is a plethora of options of materials available to use. The choice mainly depends on the architecture, style, location and orientation of the building. Wall cladding also contributes to a wonderful and effective insulation solution for the problems of external or even internal surfaces.

COFFEE / DINING TABLE TOPS

## COFFEE / DINING TABLE TOPS

The dark shades and stunning colours of a well-made piece of marbled furniture can fit the requirements of any interior design aesthetic & Marble is an extremely resilient material that can withstand the damages of daily living. It is, therefore, a fantastic option for dining tables.

You won't have to worry a lot about scratches or stains on your table from tableware rubbing up against it. While you're eating, even though it would yield some scratches. Despite being transparent by nature, the material can resist marks better than other materials such as wood once it has been cleaned and polished
