About us

Al Harf Metal Engineering Experienced on metal industries. We have positioned ourselves at the forefront of specialized providers for integrated engineering and structural solutions across the UAE.

We innovate, design, drawing and execute with the highest standards of professionalism, delivering projects marked by durability, precision, and architectural elegance. Our core expertise includes advanced engineering solutions in metal fabrication, shade systems and outdoor shading solutions, and decorative metal applications – all powered by state-of-the-art technologies like laser cutting and electrostatic powder coating.

At Al Harf Metal Engineering, we believe every project is a new opportunity to demonstrate excellence. That's why we fuse creativity, quality, and innovation to deliver value that exceeds expectations. Backed by a team of qualified engineers and technicians and driven by passion for precision, we provide products and services that support infrastructure, commercial, and architectural projects across UAE.

Steel Structures

Our structural steel fabricators provide the ultimate solution for all your construction needs. Whether you're planning a steel building, a ready-made garage, or a durable hangar, we deliver reliable and cost-effective solutions tailored to your exact specifications. Every structure is engineered to last and perform under all conditions. Our experienced engineers work closely with you to design and fabricate the perfect steel structure that meets your project requirements and fits your budget.

Steel Stairs Fabrication

Looking for strong, stylish, and safe steel stairs in UAE? Our expert team delivers top-notch steel stairs fabrication with precise engineering and elegant finishes. We use premium materials to ensure durability, safety, and a sleek modern look. Whether it's for your home, office, or industrial site – we customize every staircase to fit your space perfectly. Built to last, designed to impress!

Outdoor Sun shades & Tents

Al Harf Metal Engineering Shades, your one-stop-shop for high-quality, custom-made shade solutions. Our company specializes in designing, manufacturing, and installing a wide range of shade products, including shade sails, tensile shades, shade structures, car parking shades, and swimming pool shades. Our shades are made from the finest materials, including HDPE and PVC covers, ensuring durability and long-lasting protection against harsh weather conditions.

Car Parking Shades

Premium car parking shades- built the best car parking shades suppliers in UAE solutions for businesses, malls, and commercial parking lots.

Custom Metal Fabrication

At Al Harf Metal Engineering, we provide industry-leading metal fabrication services designed to meet the exacting standards of commercial, industrial, and construction projects across UAE. With a strong focus on precision, durability, and customization, we deliver tailored solutions that serve the structural and aesthetic demands of today's fast-paced B2B landscape.

PEB Steel Structure

Most commercial and industrial sites are implementing this type of construction for different spaces like warehouses, offices, retail spaces, and more. PEB are a great thing to implement for several reasons, such as cost-effectiveness, time efficiency, added durability, sustainability, and customizable design options. Pre-engineered buildings are efficiently designed and can be lighter by almost 30%. In addition, it is a cost-effective solution due to less steel requirement in the structural framework, making the erection process faster and much easier. In comparison with conventional steel structures, PEB Steel Structures are mainly formed by standard sections and connections, significantly reducing design and time.

Hot Rolled Steel Structure

When constructing Pre-Engineered Buildings (PEBs), one material that is used for its structural integrity is the hot-rolled steel. With its exceptional strength, versatility, and cost-effectiveness, hot-rolled steel plays a crucial role in ensuring the durability and stability of structures.

Hot-rolled steel undergoes a specific manufacturing process involving heating the metal above its recrystallisation temperature and moving it into various shapes and sizes. This process enhances the material's mechanical properties and makes it highly malleable, allowing for easy fabrication and customisation.

We provide design fabrication and erection for commercial, industrial and architectural buildings both hot rolled and PEB besides the expert in structural steel fabrication and erection services we offer multitude of other services such as

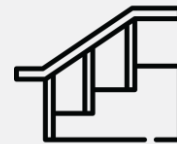

PEB

We fabricate different types of PEB structures like gable roof, monoslope roof and others based on customer needs.

Hot Rolled

We fabricate different types of HR structures like Truss structure gable, monoslope and others based on customer needs.

Hand Rail

We fabricate different types of handrails MS, aluminum and stainless steel

Gate

We fabricate different types of handrails MS, aluminum, cast aluminum and stainless steel

Design

We provide design and approval drawing and design calculation for any kind of steel structure.

Repair

We provide repair and rehabilitation work like painting, sheet fixing etc..
