Experience

About Us

Our Mission

At ALEC Contracting LLC SPC, we are dedicated to providing comprehensive, end-to-end solutions that deliver exceptional value to our esteemed clients.

Our Vision

To be the leading provider of innovative, sustainable, and integrated solutions in the construction and contracting industry, empowering our clients with cutting-edge technology

Our Values

At ALEC, we set the bar high in everything we do. From the smallest detail to the largest project, we pursue excellence through precision and a relentless commitment to quality.

SERVICES

Seamless Solutions for Every Aspect of Your Project

Civil works

The building of ADNOC's oil and gas fields frequently requires the services of civil engineers. Along with other construction management and evaluation tasks that require their specialized knowledge, there is a substantial amount of foundation work and other support structures that need to be constructed. There will be numerous large structures in processing facilities like Alec's, which must be built after consulting with civil specialists. In oil and gas industries, civil engineering expertise is needed for everything from tanks, foundations, process control buildings, equipment shelters, and pipe racks and pipe support structures.

Alec works on all types of civil projects needed on oil and gas fields. Among the services we provide are earth or gatch track construction, concrete work, mechanical and manual excavation, and the installation and provision of foundations for pipes. Alec can also assist you if an existing field needs to be disassembled or destroyed

Mechanical Works

People with a variety of talents are employed in the construction of ADNOC's oil and gas field. However, because they have some of the most important jobs to do there, mechanical engineers are in high demand among engineers. You may easily spot a number of projects requiring mechanical competence throughout the course of a developing oil and gas field if you glance around the site. The design and operation of the many types of machinery utilized across the site are handled by mechanic specialists. Mechanical engineers also develop the majority of the tools used on-site.

Manpower Supply

A robust workforce is necessary for the day-to-day operations of every ADNOC field. With CICPA passes for every ADNOC camp, Alec has a sizable human resource base. These employees are readily available to work at any oil and gas construction site in the United Arab Emirates. Before being selected for the specific job function, each individual must pass a rigorous selection procedure and undergo extensive vetting. Therefore, you can be confident that your oil and gas projects will have the greatest personnel. There are a number of specialized positions that need to be filled at oil and gas building sites. For instance,

before beginning any work, a number of regulatory work permissions need to be obtained.

Accommodation

For all sectors, we offer lodging camps that have been certified by ADNOC. We provide the greatest accommodations because we sincerely care about the welfare of our staff. The facilities are regularly upgraded and improved with the comfort and happiness of the prisoners in mind.

Vehicle & Equipment Rental

Advanced equipment or tools are necessary at ADNOC's oil and gas field sites in addition to superior labor. We offer rental services for a variety of tools, equipment, and vehicles with CICPA permits that you may need on your building site thanks to CICPA passes Amphi. We have about 150 assets, including vehicles, machinery, and equipment.
