PRODUCTS

PTFE SHEET

TEFLON PROVIDES EXCELLENT THERMAL INSULATION AND IS THE MOST CHEMICALLY RESISTANT PLASTIC KNOWN. IT IS UNEFFECTED BY MOST CORROSIVE LIQUIDS, VAPOURS AND GASES. TEFLON WILL INSULATE TO 500 VOLTS / MIL AND DOES NOT MELT. BECAUSE OF THESE PROPERTIES, TEFLON ARE USED IN PETROCHEMICAL, ELECTRICAL AND FOOD INDUSTRIES.

PTFE ROD

PTFE WAS THE FIRST FLUOROCARBON. IT IS THE MOST CHEMICALLY RESISTANT PLASTIC KNOWN. ONLY A FEW CHEMICALS REACT WITH IT. ITS MECHANICAL PROPERTIES ARE LOW COMPARED TO OTHER ENGINEERING PLASTICS, BUT IT'S PROPERTIES REMAIN AT A USEFUL LEVEL OVER A GREATER TEMPERATURE RANGE, FROM -240°C TO 260°C . PTFE HAS EXCELLENT THERMAL AND ELECTRICAL INSULATION PROPERTIES. AND IT HAS A LOW COEFFICIENT OF FRICTION. IT IS DIFFICULT TO MAKE ANYTHING ADHERE TO PTFE. WITHOUT PROPER PREPARATION, A MATERIAL MAY STICK TO IT, BUT THE MATERIAL CAN BE PEELED OFF OR RUBBED OFF.

HDPE SHEET

HDPE SHEET OR TO GIVE IT ITS COMPLETE NAME, HIGH DENSITY POLYETHYLENE SHEET, IS A VERY VERSATILE ENGINEERING PLASTIC WHICH HAS BEEN LABELLED "CHOPPING BOARD MATERIAL" WHICH IS SELF EXPLANATORY BECAUSE IT'S BECOME FAMOUS IN HUGE FOOD PRODUCING FACTORIES, RIGHT DOWN TO DOMESTIC KITCHEN ENVIRONMENTS AS AN EXCELLENT BOARD FOR CHOPPING FOOD ON. HDPE SHEET TENDS TO BE KIND TO KNIFE BLADES AND HDPE WILL PROBABLY KEEP YOUR KNIFE SHARPER FOR LONGER AND BECAUSE HDPE IS CLASSED AS FOOD SAFE IT BECOMES THE PLASTIC OF CHOICE.

HDPE ROD

IF YOUR LOOKING FOR A MATERIAL THAT IS ECONOMICAL, HAS LOW FRICTION AND GOOD ABRASION RESISTANCE, IS ALSO EASY TO MACHINE BUT DOESN'T INVOLVE EXTREME LOADS OR HIGH IMPACT RESISTANCE THEN HDPE ROD WOULD PROBABLY BE WORTH INVESTIGATING FURTHER.

NYLON SHEET

NYLON SHEET IS BY FAR THE MOST POPULAR ENGINEERING PLASTIC SHEET. THAT IS PROBABLY BECAUSE IT HAS GOT SO MANY ADVANTAGES AND ALTHOUGH THERE ARE OTHER PLASTICS THAT CAN OUTPERFORM NYLON SHEET IN CERTAIN AREAS. NYLON SHEET WINS OUT BECAUSE IT DOES MOST THINGS VERY WELL AND HAS GREAT OVERALL VERSATILITY.

NYLON ROD

NYLON ROD IS DEFINITELY OUR MOST POPULAR ENGINEERING PLASTIC. IT HAS BEEN AROUND FOR YEARS AND HAS BEEN GIVEN MANY DIFFERENT TRADE NAMES OVER THE YEARS BY VARIOUS COMPANIES. IT HAS BECOME A PLASTIC THAT BECAUSE OF IT'S VERSATILITY IS SPECIFIED. IT SEEMS, FOR JUST ABOUT EVERYTHING. THERE ARE ESSENTIALLY TWO MANUFACTURING PROCESSES FOR NYLON ROD, EXTRUDED AND CAST. AS THE NAMES SUGGESTS, EXTRUDED IS MANUFACTURED BY HEATING THE POLYMER AND FORCING IT THROUGH A CIRCULAR DIE.

PVC SHEET

PVC SHEET IS A DURABLE, TOUGH MATERIAL THAT IS RESISTANT TO CHEMICALS, ACIDS, WEATHER AND ABRASION. IT CAN BE MACHINED AND TOOLED INTO A VAST VARIETY OF SHAPES AND COMPONENTS. IT IS STRONG YET RELATIVELY LIGHTWEIGHT, AFFORDABLE AND WIDELY AVAILABLE. WHILE IT HAS A LOW MELTING POINT IN COMPARISON TO OTHER PLASTICS, THIS IS A GREAT ADVANTAGE TO FABRICATORS. IT HAS A VERY GOOD FIRE RATING AS ITS SELF EXTINGUISHING.

PVC ROD

PVC ROD IS A DURABLE MATERIAL THAT IS RESISTANT TO CHEMICALS, ACIDS, WEATHER AND ABRASION. IT CAN BE MACHINED AND TOOLED INTO A VAST VARIETY OF SHAPES AND COMPONENTS. IT IS STRONG YET RELATIVELY LIGHTWEIGHT, AFFORDABLE AND WIDELY AVAILABLE. WHILE IT HAS A LOW MELTING POINT IN COMPARISON TO SOME OTHER PLASTICS IT HAS A GOOD FIRE RATING, IT HAS A SERVICE LIFE THAT WILL OUTLAST THE PERSON WHO WORKS WITH IT! FURTHER.

RUBBER SHEET

RUBBER SHEETS ARE NOT CONSIDERED IMPORTANT BUT, TECHNICALLY AND APPLICATION WISE IT CREATES MAJOR ISSUES. USE THE WRONG GRADE OR LOW QUALITY RUBBER MAY DAMAGE COSTLY EQUIPMENT AND PEOPLE. WE MAINTAIN HUGE INVENTORY OF HIGH QUALITY RUBBER SHEETS ENSURED ITS CONTENTS TO MEET STANDARD SPECIFICATION REQUIREMENTS.

CNAF (NON ASBESTOS SHEET)

NON-ASBESTOS GASKET SHEETS ARE MADE USING ORGANIC FIBERS, ARAMID FIBERS, NBR AND MINERAL FIBERS. THESE CAN BE USED FOR APPLICATION WHERE WATER OR OIL RESISTANCE IS REQUIRED. GENERALLY, NON-ASBESTOS GASKET SHEETS ARE USED IN LOW-PRESSURE APPARATUS, TRANSFORMERS, AND COMPRESSORS.

MESH | SHEET | SHIM

MESHES ARE STRUCTURES MADE FROM MULTIPLE METALLIC WIRES INTERCONNECTED THROUGH DIFFERENT METHODS, FORMING EITHER TWO-DIMENSIONAL OR THREE-DIMENSIONAL GRIDS. WIRE MESH IS COMMONLY UTILIZED ACROSS DIVERSE APPLICATIONS INCLUDING TRANSPORTATION, DISPLAY, FENCING, AND PROTECTION. CONSEQUENTLY, IT PLAYS A CRUCIAL ROLE IN BOTH INDUSTRIAL AND EVERYDAY CONTEXTS. METAL MESH SHEETS ARE MADE FROM A VARIETY OF MATERIALS SUCH AS STAINLESS STEEL, GALVANIZED STEEL, PLAIN CARBON STEEL, ALUMINUM, COPPER, BRONZE, BRASS, AND OTHER SPECIALIZED METALS.

BEARINGS

BEARINGS ARE MECHANICAL COMPONENTS THAT ARE USED TO REDUCE FRICTION BETWEEN MOVING PARTS AND SUPPORT ROTATIONAL OR LINEAR MOTION. THEY ARE CRUCIAL IN VARIOUS INDUSTRIES AS THEY ENABLE SMOOTH AND EFFICIENT OPERATION OF MACHINERY AND EQUIPMENT. WITHOUT BEARINGS, THE FRICTION BETWEEN MOVING PARTS WOULD CAUSE EXCESSIVE WEAR AND TEAR, LEADING TO DECREASED PERFORMANCE AND POTENTIAL DAMAGE.

COUPLINGS

A MECHANICAL DEVICE THAT CONNECTS SIMILAR OR DISSIMILAR SHAFTS IN MACHINES TO TRANSMIT POWER AND MOVEMENT. A COUPLING MAY BE RIGID OR FLEXIBLE. THE COUPLING WORKS BY MAINTAINING A STRONG BUT FLEXIBLE CONNECTION AT ALL TIMES BETWEEN TWO SHAFTS TO TRANSFER MOTION FROM ONE SHAFT TO ANOTHER. IT DOES SO AT ALL VALUES OF LOADS AND MISALIGNMENT WITHOUT PERMITTING ANY RELATIVE MOTION BETWEEN THE TWO SHAFTS.
