Under Ground Services Sure, We Can Do It.

We are specialized in:

- Road Crossing.
- Railway Crossing.
- Highway.
- Water channel Crossing.
- Bridge.
- Landscape Crossing.

01

About Us

1.01 OVERVIEW

INFRAMAX General Contracting are dealing with "HORIZONTAL DIRECTIONAL DRILLING" by latest and modern technologies, capable to work on hard rocks, sand areas and under water. Innovative processes for laying out pipes such as HDPE and Carbon Steel with well qualified personnel who can assist in finding solution in any type of boring works with the most suitable Horizontal Drilling Machine along with a number in many advantages like trenchless, ecological, economical, safe, and fast way of boring results.

BORING PATH

The bore path entry pit to exit pit must be planned before the boring begins. It can be marked on the ground with chalk dust or written in paper for operator references. For complicated bores it must consult to engineer, have job site surveyed and bore path calculated. Be sure engineer knows the minimum entry pit bend limits of drill pipes and pullback material, pipe lengths and location of all underground utilities. for less complicated path, bore will be limited in four measurements: *recommended bend limits, entry pit,*

minimum set back and minimum depth. Recommended bore limits must be considered during bore entry.

DIRECTIONAL BORING PROCESS

Recommended Bend Limit:

Though Drilling pipes are designed to bend, bending beyond recommended limits will cause damage that might not be seen. This damage adds up and can lead to sudden pipe failure.

UFE 10,000T: These pipes have a tested bend radius of 230 ft (70.1m), measuring a 90-degree bend, whether during entry and exit or when turning, required 230 ft (70.1m) or forward distance and approximately 354 (54m) of pipe.

Use APPENDIX, sections A and B, to keep bends within safe limits and make sure pitch changes no more than 8% per UFE pipe.

Minimum Depth

Because pipe must be bent gradually, entry pitch and bend limits determine how deep the pipe will be when reaches horizontal. Use the chart in APPENDIX, section B, to determine minimum depth for your job.

To reduce depth, reduce entry pitch. To increase depth, increase entry pitch and set-back.

DIRECTIONAL BORING PROCESS

INFRAMAX is one of the pioneers of **Horizontal Directional Drilling (HDD)** in the U.A.E.

As techniques and working methods have improved, the Horizontal Directional Drilling operation has become a major contribution to the **Non-Disruptive Road Crossing (NDRC)** division.

The process generally includes five distinct phases are as follows:

1. *Planning, Preliminary survey.*
2. *Selecting the drilling units and drilling tools.*
3. *Drilling a small pilot bore hole, using technology that allows the drill to be steered and tracked from the surface.*
4. *Enlarging the hole by pulling back increasingly large reamers. (Back reaming or upsizing bore)*

5. Pulling in the pipe.

A well-planned HDD Operation includes preliminary survey of the bore path area, concerning other existing lines and the soil condition. Locating all existing services and plotting them on a drawing, then plan the best drilling path and include on the latest drawing to avoid all affected existing services.

The Choice of the drilling unit depends upon the bore length, the diameter of the pipe to be installed and the soil quality. It is important to choose the correct Drilling unit and tools for suitable bore length, and conditions. Site operation starts with drilling of the pilot hole from the surface on one side of the obstacle to be crossed. Continuous drilling.

Along a designed profile below and beyond the obstacle, and to exit at the surface on the other side drilling pilot bore hole. The pilot bore is launched from the surface at an angle between 5 and 15 degrees to the horizontal, and transitions to horizontal as the required depth was reached. A bore path of very gradual curvature or near straight alignment is normally followed to minimize friction and to stay within the allowable joint deflection and the allowable bend radius for the pipe. This minimizes the chance of getting the pipe string "hung up" in the soil or damaging the pipe string.

02

Services

2.01 HORIZONTAL DIRECTIONAL DRILLING (HDD)

- Installation & Repair of Oil & Gas Pipelines.
- Installation & Repair of Water Pipelines.
- Installation & Repair of Sewerage Pipelines.
- Installation & Repair of Electric Services Pipelines.
- Installation & Repair of Telecommunication Pipelines.

INFRAMAX General Contracting are dealing with "HORIZONTAL DIRECTIONAL DRILLING" by latest and modern technologies, capable to work on hard rocks, sand areas and under water. HDD is a steerable trenchless method of installing underground pipe, conduit, or cable in a shallow arc along a prescribed bore pass by using a drilling rig, with a minimal impact on surrounding area.

PRE-HDD SERVICES

WHY HDD TECHNIQUE

- ✓ Underground installation of utilities with a minimum surface disruption.
- ✓ Cost lower with greater installation depth.
- ✓ Deeper installation which leads to less chance of damaging existing underground utilities
- ✓ Less equipment and manpower which lead to lower cost.
- ✓ Durability and flexibility

2.02 - OTHER SERVICES

INFRAMAX General Contracting has completed many projects within the telecommunications industry, Gas pipeline installation, and water pipe installation.

“

HIGH ACCURACY,
QUALITY & SAFETY.

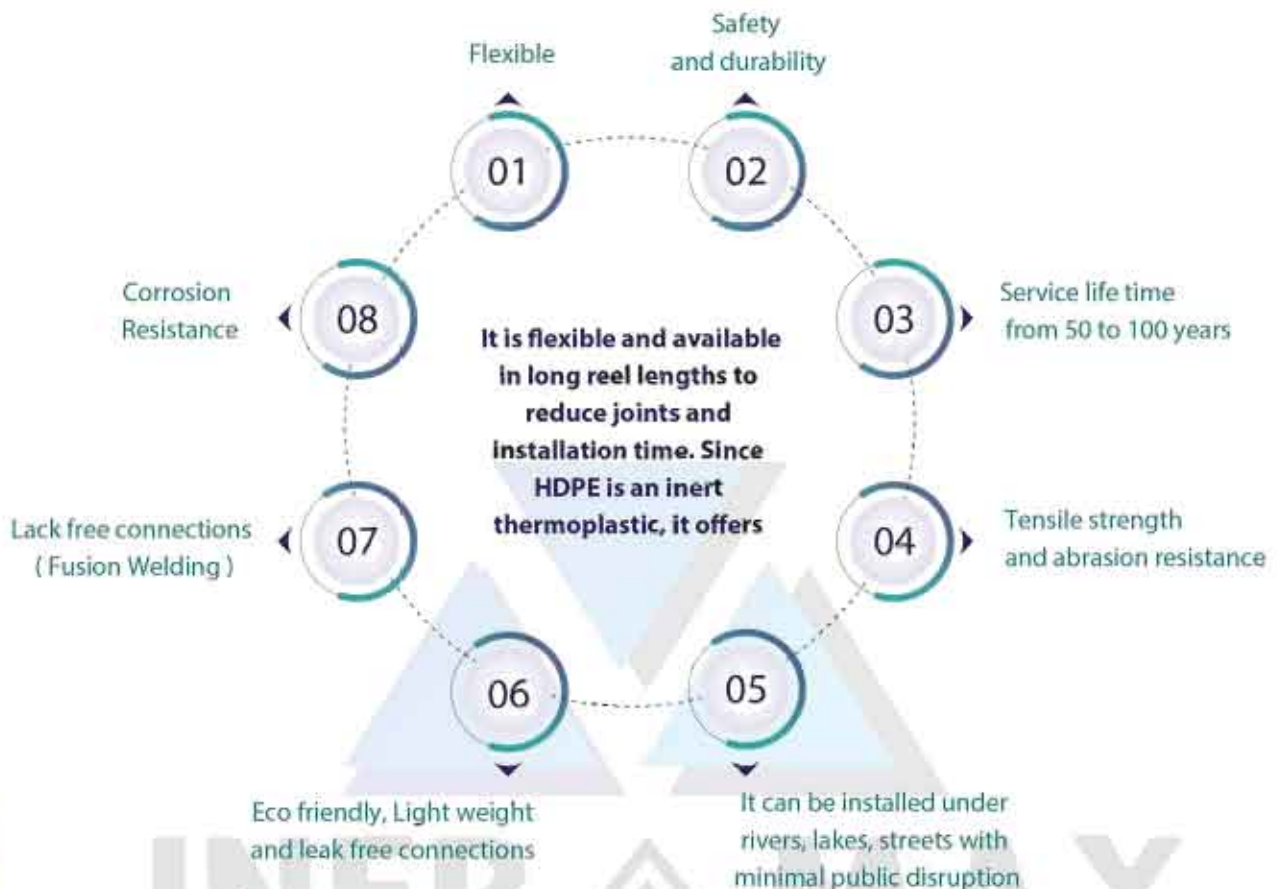

”

2.03 - WHY (HDPE) PIPE

HDPE

(High Density Polyethylene) pipe is especially suited to installation by HDD.

GENERAL CONTRACTING

02

Performance

3.01 - PROJECT MANAGEMENT

A well-illustrated project plan is a critical and key first step when beginning any project to illustrate the key objectives to be achieved and those objectives (Close 3.08), we provide the highest standards projects by utilizing our experienced project managers to laying out a project timeline displayed as milestones and tasks on a timeline.

3.02 - QUALITY

INFRAMAX General Contracting is a leading provider of contracting services and construction management. The management is committed to operate every aspect of the business within standards that offer the highest possible quality of service. With professionalism and transparency, we aim to satisfy our clients and build long-term relationships based on loyalty and trust. We thoroughly search to team up with competent employees and qualified experts to meet the Quality Management System requirements stated in Standard ISO CERTIFIED (ISO 9001: 2015), (ISO 14001: 2015), (OHSAS 18001: 2007). We are dedicated to continuously train our teams and appraise their performance to work out potential opportunities and reinforce technical proficiency.

3.03 - SAFETY

Safety is among our core values. Safety always comes first; we are committed to:

- ✓ Conducting our business with respect and care for people and the environment.
- ✓ Utilizing natural resources responsibly.
- ✓ Continually improving our safety, health, and environmental performance.
- ✓ Complying with all applicable legal and other agreed requirements.
- ✓ Promoting dialogue with stakeholders about safety, health, and environmental performance.

Our Occupational Health & Safety Manual is intended to protect the organization's employees, subcontractors, owners, and the general public from any work-related accidents, and its properties from any loss or damage as well as protect the environment in compliance with customer requirements and related laws and regulations.
