# WE SPECIALISE IN

**Slotted Angle Shelving**

**Bolt-Free Shelving**

**Medium Duty Long Span**

**Mobile Shelving**

**Heavy Duty Pallet Racking**

**Mezzanine Shelving**

**Drive-in Pallet Racking**

**Shuttle Racking**

**VNA (Very Narrow Aisle)**

**Cantilever Racking**

**Plastic Pallets & Bins**

**Lockers**

# COMPANY PROFILE

We are dedicated to provide the best in shelving. We are a one-stop-shop for all industrial shelving needs. Our top quality shelving selection is the most complete and varied, when combined with a friendly customer service staff and extensive distribution network, we are paralleled by no other metal storage company.

Established in the year of 1995, our expertise has decades of experience in major shelving projects in the Middle East and East African countries.

We provide all kinds of Shelving & Racking systems like Slotted Angle Shelving system, Bolt free shelving, Mobile shelving, Heavy duty pallet racking, Drive-in Racking, Mezzanine flooring and also supply plastic pallets and bins.

## MISSION

Our mission is to achieve sustained growth, profitability and customer satisfaction through outstanding service and reliable products while never sacrificing our values.

Whether implementing full warehouse storage and racking systems or a small scale shelving project, we ensure that the project is designed to suit your requirements.

All our products are manufactured from high quality steel and finished with a powder coated tint for a long lasting durability.

We design Supply and Install Storage Systems from renowned and ISO certified manufacturers, who are from South Africa, Italy and India.

## MERITS

We deliver excellent storage products at an unbeatable price. Over the years we have developed long-term relationships with many of our clients, understanding the intense nature of their business needs, and thus becoming indispensable to market leaders.

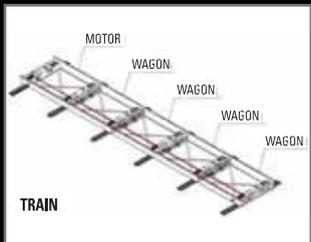

"On one side there are thousands of companies looking to expand but cannot find the right shelving.

On the other side is an easy storage system, better utilized space and more profits.

In the middle is our company making SPACE work for you."

# MOBILE SHELVING

Mobile shelving is typically used for academic or commercial applications where a significant volume of physical archive material, filing or books are to be stored.

These include medical or government records, file-intensive offices such as the legal or accountancy professions, and public and academic libraries and similar archives.

Noiseless, but most important minor inertia of movement and therefore greater safety, all thanks to the new shaped-belt, which replaces the traditional transmission chain.

A new configuration, but also a new material, rubber instead of metal, for one of the main transmission devices to establish a new benchmark in the field of compact mobile filing system.

An innovative system, useful and effective: the modular aluminum rail allows to assemble doors quicker and easier. Time saved so money saved For a most pleasant and accurate use of our mobile shelving system's integral traction system, is the employ of sealed ball bearings to support wheels: maximum fluency and absence of friction, but also long-life and protection from dust.

# SLOTTED ANGLE SHELVING

Slotted angle shelving is a system of reusable metal strips used to construct shelving, frames, work benches, equipment stands and other structures.

The name derives, first, from the use of elongated slots punched into the metal at uniform intervals to enable assembly of structures fixed with nuts and bolts, and second, from the longitudinal folding of the metal strips to form a right angle.

Height: 2 meters 2.5 meters and 3 meters

Depth: 300mm , 450mm and 600mm

Width: 900 mm

Load capacity: 100 kgs per level

Size can be customized as per requirement

## BOLT - FREE SHELVING

Adjustable Bolt-Free shelving allows more flexible use of shelves to hold items of value for storage, display or sale.

Like fixed shelves, the horizontal surface is normally made up of strong materials such as wood or steel, but their exact vertical positioning can be varied through the use of frames into which supporting brackets or shelves themselves can be fixed at different heights.

Versatile, also for multi-level systems, wide range of accessories for archives or light warehouses. Its option to create walkways also permits the creation of multilevel structures.

Height: 2.5 meters and 3 meters

Depth: 300mm to 600mm

Width: 765 to 1265mm

Load capacity: 150 kgs per level

## MEDIUM DUTY LONG SPAN

### Decking Options: Plywood, GI Panel & GI Wire mesh

Long span shelving is a durable rack system that allows maximum storage strength with quick and easy assembly.

Versatile and functional shelving, Height adjustable shelf levels, Fast, easy to assemble or disassemble, Clip-together installation with minimal use of nuts and bolts.

Uprights provide excellent strength and rigidity, Wide range of standard sizes available, varying shelf load capacities available, single tier, two tier and high rise.

Storage applications include Garment storage, Cleanroom storage, Tyre racking and more

Height: 1 to 3 meters

Depth: 600mm , 900mm, 1100mm and 1200 Width: 1220mm, 1850mm and 2440mm

Load capacity: upto 1 ton

Size can be customized as per requirement

# HEAVYDUTY PALLET RACKING

Height: up to 11 meters

Depth: 600mm , 900mm and 1100mm and 1200

Width: 2440mm, 2700mm and 3000mm

Load capacity: upto 1 to 3 tonnes

Size can be customized as per requirement

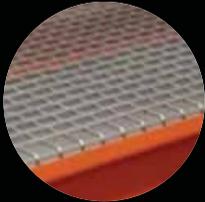

## Decking Options:

Plywood

G.I. Panel

G.I. Wire mesh

Metal Grating

Pallet Racking is relatively a low cost method of utilizing your space efficiently, and also with an eye on the safety aspect of your business. We can help you make optimal use of your warehousing and other storage space.

## Single Selective Racking

- Most cost effective storage system with the lowest equipment and capital costs
- Direct access to all pallets for 100% accessibility and good stock rotation

## Back to Back Racking

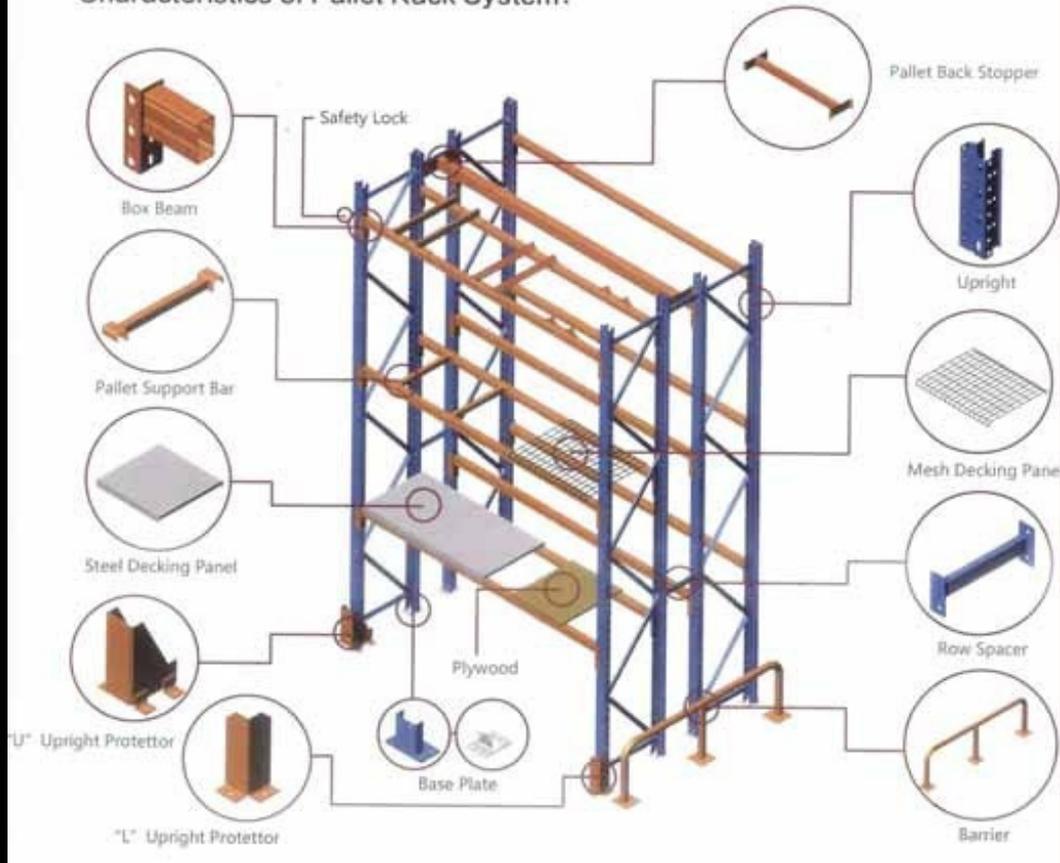

- The ability to stack two pallets deep with access most commonly provided from entry face only
- Storage density increased as rack ratio changes from selective racking
- Most common in large format DC environments requiring multiple lanes

**Decking Options:** Plywood, G.I. Panel and Wire Mesh

### Characteristics of Pallet Rack System:

## MEZZANINE SHELVING

Mezzanine Floors enable the full working height of a building to be utilized to its maximum by doubling the working area.

They are custom-designed and manufactured to suit customer specific requirements.

Mezzanine Floors can be used as storage areas, fabrication areas, packing areas and offices.

Installing a Mezzanine Floor is the most cost effective way of optimizing your existing space

## DRIVE-IN PALLET RACKING

Drive-In Racking is recommended where multiple unit loads per stock keeping unit need to be stored.

The high density of storage attained and the relative ease or accessibility make this rack system ideal for cold storage, bulk storage production areas or pre-marshalling areas.

Where a "first-in", "first-out" operation is required, drive-thru storage systems require a two aisle configuration.

"drive-in racking" allows maximum cube utilisation with one aisle and first- in, last-out storage.

# SHUTTLE RACKING

Our Shuttle Racking System is a semi-automated storage solution for the handling of goods inside channels similar to a drive-in setup.

The Pallet Shuttle System removes the need for forklift trucks to enter the aisles and hence assuring the maximum use of the warehousing, making the facility more productive and efficient.

Shuttles are powered by an innovative Lithium Ion battery easy to recharge and managed by an interactive radio transmitter, moves goods on pallets into the drive-in channels. They pick up, drop and reorganize pallets in the storage channels.

## VNA (VERY NARROW AISLE)

Very narrow aisle otherwise known as VNA, is the use of selective pallet racking in a tighter configuration to provide maximum space utilization within a storage facility.

These systems typically operate in conjunction with reach-truck systems. A distinct advantage of a narrow aisle pallet racking is fast picking without large aisles which results in improved use of space.

When there is limited space, a compact storage method is ideal. Fully adjustable system flexibility and space saving aisles can be manipulated as one to give the greatest amount of pallet storage locations.

## CANTILEVER RACKING PLASTIC PALLETS, BINS & LOCKERS

**Cantilever shelving** is ideal for storage of goods such as bundles of tubes or planks characterized by volume and dimensions that may make it difficult to position. It is also suitable for pallets and metal containers.

The Cantilever shelving is characterized by a remarkable modularity, both in height and in depth. Arms and columns are made in different sizes and dimensions, as per the requirement of the warehouse.

**Plastic pallets** are resistant to odour & fire. They have a longer service life span, and offer better product protection. Lighter weight of these pallets saves transportation and labour costs and makes them safer and more environmentally friendly.

A simple and effective range of **Storage Bins**, resistant to most solvents. Polypropylene construction range of storage bins for small parts storage.

We sell Single door, Double door and up to 6 door **lockers** & Office cupboards
